# Math Behind Sports Course Overview 

Content Area: Math<br>Course(s):<br>Time Period:<br>Length:<br>Status:<br>Quarter Course<br>Published

## Textbooks and other resources

Textbook:

TI-83 or TI-84 graphing calculator is required for this course

MA.K-12.1
MA.K-12.2
MA.K-12.3
MA.K-12.4
MA.K-12.5
MA.K-12.6
MA.K-12.7
MA.K-12.8

Make sense of problems and persevere in solving them.
Reason abstractly and quantitatively.
Construct viable arguments and critique the reasoning of others.
Model with mathematics.
Use appropriate tools strategically.
Attend to precision.
Look for and make use of structure.
Look for and express regularity in repeated reasoning.

## NJ Student Learning Standards

| MA.S-CP.A. 1 | Describe events as subsets of a sample space (the set of outcomes) using characteristics <br> (or categories) of the outcomes, or as unions, intersections, or complements of other <br> events ("or," "and," "not"). |
| :--- | :--- |
| MA.S-CP.A. 2 | Understand that two events $A$ and $B$ are independent if the probability of $A$ and $B$ <br> occurring together is the product of their probabilities, and use this characterization to <br> determine if they are independent. |
| MA.S-CP.A. 3 | Understand the conditional probability of $A$ given $B$ as $P(A$ and $B) / P(B)$, and interpret <br> independence of $A$ and $B$ as saying that the conditional probability of $A$ given $B$ is the <br> same as the probability of $A$, and the conditional probability of $B$ given $A$ is the same as <br> the probability of $B$. |
| Construct and interpret two-way frequency tables of data when two categories are |  |
| MA.S-CP.A.4 | associated with each object being classified. Use the two-way table as a sample space to <br> decide if events are independent and to approximate conditional probabilities. |
| Mecognize and explain the concepts of conditional probability and independence in |  |
| everyday language and everyday situations. |  |

| MA.S-IC.B. 5 | Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant. |
| :---: | :---: |
| MA.S-IC.B. 6 | Evaluate reports based on data. |
| MA.S-ID.A. 1 | Represent data with plots on the real number line (dot plots, histograms, and box plots). |
| MA.S-ID.A. 2 | Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets. |
| MA.S-ID.A. 3 | Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers). |
| MA.S-ID.A. 4 | Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve. |
| MA.S-ID.B. 5 | Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data. |
| MA.S-ID.B. 6 | Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. |
| MA.S-ID.B.6a | Fit a function to the data (including with the use of technology); use functions fitted to data to solve problems in the context of the data. |
| MA.S-ID.B.6b | Informally assess the fit of a function by plotting and analyzing residuals, including with the use of technology. |
| MA.S-ID.B.6c | Fit a linear function for a scatter plot that suggests a linear association. |
| MA.S-ID.C. 7 | Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data. |
| MA.S-ID.C. 8 | Compute (using technology) and interpret the correlation coefficient of a linear fit. |
| MA.S-ID.C. 9 | Distinguish between correlation and causation. |
| MA.S-MD.A. 1 | Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions. |
| MA.S-MD.A. 2 | Calculate the expected value of a random variable; interpret it as the mean of the probability distribution. |
| MA.S-MD.A. 3 | Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. |
| MA.S-MD.A. 4 | Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. |
| MA.S-MD.B. 6 | Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator). |
| MA.S-MD.B. 7 | Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game). |
| MA.S-MD.B.5a | Find the expected payoff for a game of chance. |
| MA.S-MD.B.5b | Evaluate and compare strategies on the basis of expected values. |

## Grading and Evaluation Guidelines

## GRADING GUIDELINES:

As per Math Department Policy, grades will be determined by a variety of assessment strategies, including Major Assessments, Minor Assessments, and Performance Assessments. In addition to tests and quizzes, students will be evaluated on a combination of performance assessment instruments, including homework completions, cooperative group participation, note-taking, open ended question responses, lab reports and/or supplemental projects.

## GRADING PROCEDURES:

Grading procedures must be described in sufficient detail so that a pupil will understand, the minimal to advanced proficiency, expected of him/her as the outcome of each unit, for the marking period and for the course as a whole. Benchmark level assessments associated with the course also need to be identified. While assessments of proficiency levels must be valid and reliable they do not need be the same for all students. Other criteria to be considered in grading must be identified and the degree to which such criteria will be considered in a grade. Each pupil must receive a copy of the grading procedures, proficiencies and criteria for each unit and/or marking period.

## COURSE EVALUATION:

Course achievement will be evaluated as the percent of all pupils who achieve the minimum level of proficiency (final average grade) in the course. Student achievement levels above minimum proficiency will also be reported. Final grades, and where relevant mid-term and final exams, will be analyzed by staff for the total cohort and for sub-groups of students to determine course areas requiring greater support or modification.

In terms of proficiency the East Brunswick grades are as follows:

| A | Excellent | Advanced Proficient |
| :--- | :--- | :--- |
| B | Good | Above Average Proficient |
| C | Fair | Proficient |
| D | Poor | Minimally Proficient |
| F | Failing | Partially Proficient |

In this course the goal is that a minimum of $95 \%$ of the pupil's will meet at least the minimum proficiency level ( D or better) set for the course. The department will analyze the achievement of students on Unit Assessments, Mid-term and Final Exams and Final Course Grades, and for Final Course Grades the achievement of sub-groups identified by the state to determine if modifications in the curriculum and
instructional methods are needed.

## Course evaluation requires the answering of the following questions:

1. Are course content, instruction and assessments aligned with the required NJSLS?
2. Is instruction sufficient for students to achieve the Standards?
3. Do all students achieve the set proficiencies/benchmarks set for the course?

## Other Details
