

Unit 8: Prototyping and Presentations

Content Area: **Technology**
Course(s):
Time Period: **December**
Length: **3 weeks**
Status: **Published**

Enduring Understandings

- Prototypes are full size examples of a product.
- Models can be scaled and simplified to represent an object or system.
- Presenting is essential skills for engineers and architects to communicate design ideas and concepts

Essential Questions

- How do prototypes differ from models?
- When is it appropriate to make a prototype as opposed to a model?
- What are different ways to communicate designs and concepts?
- What are the characteristics and elements of an effective presentation?

Content

Skills

- Students will be able to create a model or prototype and develop a presentation to showcase their invention.
- Students will be able to create powerpoints and edited video presentations.

Suggested Activity: Shark Tank

Resources

Resources:

1. PC or Laptops with internet access, able to run TinkerCAD (or similar program) and the various 3D printer software platforms.
2. TinkerCAD (or other equivalent solid modeling program). TinkerCAD is a free, web-based 3D modelling application which allows users to create objects utilizing constructive solid geometry applications.
3. 3D Printers allow students to realize their designs by producing physical objects from their three-dimensional digital models.

4. Engineers scales allow students to measure items graphically depicted within technical drawings and physical objects according to a set scale.
5. AutoCAD is a computer-aided design (CAD) and drafting program used for producing 2-D and 3-D technical drawings.. AutoCAD is considered an industry standard and was developed and marketed by Autodesk Inc. A free version is available for education.
6. Autodesk Design Academy <https://academy.autodesk.com/> , supports educators by providing free, authentic project based learning guides and supporting videos.
7. Monmouth County Executive Airport locally positioned in Wall Township, New Jersey, is a potential location for an authentic learning experience through a field trip, supporting the Exploring Flight unit.
8. Consumable Materials such as bass and balsa wood, foam, hot glue, project kits, aluminum foil, wax paper, balloons, fishing line, cups and other materials are needed to support project based learning. Suggested projects include building a model architectural structure, room or facility, bridge, tower, aircraft and more.
9. Personal protection equipment such as safety goggles and gloves are required when students are at risk of injuring themselves while creating projects or utilizing tools and/or machinery.
10. Hand Tools various hand tools such as easy cutters, craft knives, hot glue guns and hot wire cutting machine will be utilized within the classroom. Safety precautions and training will be taken and provided at all times.

Standards

TECH.8.1.8.A.5	Create a database query, sort and create a report and describe the process, and explain the report results.
TECH.8.2.8.C.8	Develop a proposal for a chosen solution that include models (physical, graphical or mathematical) to communicate the solution to peers.
TECH.8.2.8.D.2	Identify the design constraints and trade-offs involved in designing a prototype (e.g., how the prototype might fail and how it might be improved) by completing a design problem and reporting results in a multimedia presentation, design portfolio or engineering notebook.
TECH.8.2.8.D.3	Build a prototype that meets a STEM-based design challenge using science, engineering, and math principles that validate a solution.
