## Enduring Understandings

---

- **Big Idea: Government in Modern America: Jacksonian Democracy**
  - Ideas of democracy reflect the values, beliefs, and political realities of a particular time and people.
  - Sectionalism both reflected and contributed to changes in the American political system.
  - Democratic practices expanded and led to a growth of the American economy which led to regional conflict, social reform, and a variety of political compromises.
  - A “true” democracy is a government of the people, by the people, for the people and the US continued its pursuit of this ideal during the early 19th century by widening the voting population, taking into account the needs of the new voices and thereby included more Americans in the process of governing.
  - Grassroots democracy altered the uniparty system by embracing the needs and concerns of the majority common man which led to a new approach in the staffing and policies of the Central Government.
  - Slavery was rationalized throughout the US during the 19th century by the manipulation of economic, social and religious factors, which led to the political rift over the sovereignty of State v. Federal governments and the lengths to which each was willing to go to exert its power over the other.
  - The long series of treaties with the Native American tribes, and broken by the federal government directly resulted in the loss of Native land, culture and lives; all of which have culminated in the present day creation of the Reservation system and legal cases filed by the native tribes to land and underlying resources.
  - The distinct sectional geography of the US created the development and dependence of each economy on either free or slave agriculture, industrialization and trade, and these rooted economic ties pushed the Federal government sway between unification under a National Bank and the preference of the individual for State Banks.
