

UNIT 4: Waves and Information

Topics at a Glance: Students will develop models to describe wave and reflection of light.

It is recommended for students to have a science journal that will allow them to display their thoughts and ideas, define vocabulary, and respond to discussion and writing prompts.

Unit Vocabulary

disturbing	amplitude	wavelength
degradation	digitized	convert
decode		

Stage 1 – Desired Results (Also see Disciplinary Core Ideas below)

Performance Expectations:

4-PS4-1: Develop a model of waves to describe patterns in terms of amplitude and wavelength and that waves can cause objects to move.

- *Clarification Statement: Examples of models could include diagrams, analogies, and physical models using wire to illustrate wavelength and amplitude of waves.*

4-PS4-3: Generate and compare multiple solutions that use patterns to transfer information.

- *Clarification Statement: Examples of solutions could include drums sending coded information through sound waves, using a grid of 1's and 0's representing black and white to send information about a picture, and using Morse code to send text.*

3-5-EST-1-2: Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.

3-5-ETS1-3: Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.

Enduring Understandings (1-3 max)

Students will understand that: (connects with EQ 1) *Students who understand the concepts are able to*

- Waves, which are regular patterns of motion, can be made in water by disturbing the surface.
- When waves move across the surface of deep water, the water goes up and down in

Essential Questions

Guiding Question: *How can we use waves to gather and transmit information?*

EQ 1: *If a beach ball lands in the surf, beyond the breakers, what will happen to it?*

<p>place; there is no net motion in the direction of the wave except when the water meets a beach.</p> <ul style="list-style-type: none"> • Waves of the same type can differ in amplitude (height of the wave) and wavelength (spacing between wave peaks) <p>Students will understand that: (connects with EQ 2) <i>Students who understand the concepts are able to:</i></p> <ul style="list-style-type: none"> • <i>Different solutions need to be tested in order to determine which of them best solve the problem, given the criteria and the constraints.</i> • <i>Research on a problem should be carried out before beginning to design a solution. Testing a solution involves investigating how well it performs under a range of likely conditions.</i> • <i>Tests are often created to embed improvements to improve the design/process</i> 	<p>EQ 2: <i>Which team can design a way to use patterns to communicate with someone across the room?</i></p>

the design problem.
(3-5-ETS1-2)

Connections to Nature of Science
Scientific Knowledge is Based on Empirical Evidence

- Science findings are based on recognizing patterns. (4-PS4-1)

Planning and Carrying Out Investigations

- Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered. (3-5-ETS1-3)

K-2.) (4-PS4-1)

- Waves of the same type can differ in amplitude (height of the wave) and wavelength (spacing between wave peaks). (4-PS4-1)

PS4.C: Information Technologies and Instrumentation

- Digitized information can be transmitted over long distances without significant degradation. High-tech devices, such as computers or cell phones, can receive and decode information—convert it from digitized form to voice—and vice versa. (4-PS4-3)

ETS1.C: Optimizing The Design Solution

- Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints. (*secondary to 4-PS4-3*)

ETS1.B: Developing Possible Solutions

- Research on a problem should be carried out before beginning to design a solution.

Testing a solution involves investigating how well it

Connections to Engineering, Technology, and Applications of Science
Interdependence of Science, Engineering, and Technology

- Knowledge of relevant scientific concepts and research findings is important in engineering. (4-PS4-3)

Influence of Science, Engineering, and Technology on Society and the Natural World

- Engineers improve existing technologies or develop new ones to increase their benefits, decrease known risks, and meet societal demands. (3-5-ETS1-2)

	<p>performs under a range of likely conditions. (3-5-ETS1-2)</p> <ul style="list-style-type: none"> • At whatever stage, communicating with peers about proposed solutions is an important part of the design process, and shared ideas can lead to improved designs. (3-5-ETS1-2) • Tests are often designed to identify failure points or difficulties, which suggest the elements of the design that need to be improved. (3-5-ETS1-3) <p>ETS1.C: Optimizing the Design Solution</p> <ul style="list-style-type: none"> • Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints. (3-5-ETS1-3)
