

Unit 4: Money and Banking

Content Area: **Social Studies**
Course(s): **AP Macro Economics**
Time Period: **December**
Length: **4 weeks**
Status: **Published**

Transfer Skills

Students will be able to independently use their learning to assess the function of the banking system as well as the Federal Reserve system.

Enduring Understandings

There are a variety of different types of money that have been used throughout history. The ability to use money as a store of value, a medium of exchange and a portable source of wealth is what makes money durable and long lasting.

Liquidity is the ability to use different stores of wealth for transactions. Very liquid mediums of exchange like dollars can be transferred freely where non-liquid assets like houses still store value but cannot be exchanged freely.

Banks are established to make the movement of money faster and easier. Their ability to loan money is what allows individuals and businesses to purchase goods and services with greater ease.

There have been many problems with the banking system throughout the years that has forced the government to regulate the system to prevent major economic downturns.

The Federal Reserve System was put into place to help regulate the banking system and to help provide capital for banks to loan out to more money.

Essential Questions

What is money and what purpose does it serve in the economy?

How does money move through the economy and what does that tell us about the relative strength of our

economy?

How does liquidity impact a company's ability to do business and to purchase good and expand their business?

What is the purpose of the Federal Reserve and how do its policies impact a country's economy?

How has the banking system evolved since its inception and what safe guards are now in place that were not there before?

Content
