Unit 3- The Time and Location of Death can be determined

Content Area: **Science**
Course(s): **Forensic Science**
Time Period: **October**
Length: **8 Blocks**
Status: **Published**

Enduring Understandings

A forensic entomologist studies the development of insect larvae in a body to estimate the time of death

Essential Questions

Why is time of death important?

Content

Vocabulary:
Necrophilious insects
Blowfly
Maggots
Larvae
Life Cycle

Skills

Identify different types human teeth
Explain why dental records can be used to identify individuals
Identify the life cycle of a blowfly
Analyze entomological data to determine the time of death
Identify the succession of insects that will provide evidence for time of death

Resources

- Teacher's Wraparound Edition for Forensic Science: An Introduction, 2nd Edition

Assessments

Performance: Lab Assignment
Lab: Entomology Report Students determine the length of time a rooster has been dead based on the larvae that are present.

Written: Informative
Research Paper: Insects and the Case They Make Using a mock case, students present the time of death, based on insect activity.

Performance: Lab Assignment
Lab: Which Bugs? Teacher rots meat and students collect larvae to analyze how long the meat has been there

Standards

SCI.9-12.1.4	Mathematical representations are needed to identify some patterns.
SCI.9-12.2.4	Changes in systems may have various causes that may not have equal effects.
SCI.9-12.CCC.1	Patterns.
SCI.9-12.CCC.2	Cause and effect: Mechanism and explanation.
SCI.9-12.CCC.7	Stability and change.
SCI.9-12.CCC.7.1	students understand much of science deals with constructing explanations of how things change and how they remain stable. They quantify and model changes in systems over very short or very long periods of time. They see some changes are irreversible, and

	negative feedback can stabilize a system, while positive feedback can destabilize it. They recognize systems can be designed for greater or lesser stability.
SCI.9-12.SEP.1	Asking Questions and Defining Problems
SCI.9-12.SEP.1.a	Ask questions
SCI.9-12.SEP.1.a.1	that arise from careful observation of phenomena, or unexpected results, to clarify and/or seek additional information.
SCI.9-12.SEP.1.d	Ask and/or evaluate questions that challenge the premise(s) of an argument, the interpretation of a data set, or the suitability of a design.
SCI.9-12.SEP.3	Planning and Carrying Out Investigations
SCI.9-12.SEP.3.d	Select appropriate tools to collect, record, analyze, and evaluate data.
SCI.9-12.SEP.4	Analyzing and Interpreting Data
SCI.9-12.SEP.4.a	Analyze data using tools, technologies, and/or models (e.g., computational, mathematical) in order to make valid and reliable scientific claims or determine an optimal design solution.
SCI.9-12.SEP.4.b	Apply concepts of statistics and probability (including determining function fits to data, slope, intercept, and correlation coefficient for linear fits) to scientific and engineering questions and problems, using digital tools when feasible.
CAEP.9.2.12.C	Career Preparation
CAEP.9.2.12.C.3	Identify transferable career skills and design alternate career plans.
	Observed patterns in nature guide organization and classification and prompt questions about relationships and causes underlying them.
