Unit 7: Area and Design

Content Area: Mathematics
Course(s): Geometry Honors 8

Time Period: March
Length: 4 weeks
Status: Published

Transfer

<u>Previous coursework</u>: know area, perimeter, surface area, and volume formulas and use them in real world applications, describe cross sections, informally derive the relationship between area and circumference of a circle, find area of irregular figures in real world applications, break down 3-D figures into nets

By the end of this unit: Students should be able to provide an informal explanation for area and circumference of a circle, and volume of a circle, pyramid, and cone using a variety of methods. Comparing the affect of manipulating dimensions and real world applications involving density and design are a big focus.

<u>Instructional strategies</u>:

- Project and problem based coursework is ideal for this unit- check the resources for ideas.
- Remember that the focus is not how to use the formulas, but where they come from.
- If time allows, review how to find the area and perimeter of figures on the coordinate plane.
- (+) = denotes Honors only skill not on PARCC

Enduring Understandings

The formulas for circular 2-D and 3-D shapes are derived from other geometric concepts.

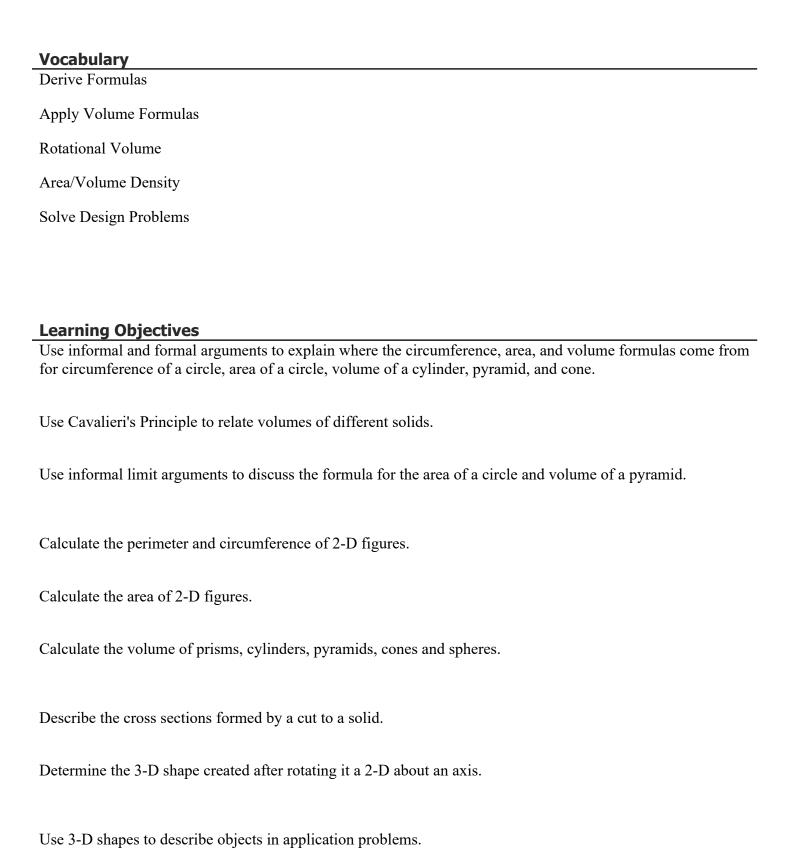

Area and volume problems arise in many fields, such as shipping, efficiency, and optimization

Essential Questions

Where do the formulas for circular 2-D and 3-D shapes come from?

How do volume and area apply to real life?

Critical Knowledge and Skills

Solve density problems involving area and volume

Solve design problems using 2-D and 3-D shapes.

Use Pick's theorem to determine the area of irregular figures (+)

Standards

RST.6-8.4 Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 6-8 texts and topics.

RST.6-8.7 Integrate quantitative or technical information expressed in words in a text with a version of that information expressed visually (e.g., in a flowchart, diagram, model, graph, or table).

- CRP2. Apply appropriate academic and technical skills.
- CRP4. Communicate clearly and effectively and with reason.
- CRP11. Use technology to enhance productivity.
- 9.1.8.A.2 Relate how career choices, education choices, skills, entrepreneurship, and economic conditions affect income.
- 9.1.8.C.5 Calculate the cost of borrowing various amounts of money using different types of credit (e.g., credit cards, installment loans, mortgages).
- 9.1.8.D.3 Differentiate among various investment options.
- 9.1.8.E.6 Compare the value of goods or services from different sellers when purchasing large quantities and small quantities.
- 9.2.8.B.7 Evaluate the impact of online activities and social media on employer decisions.
- 8.1.8.A.1 Demonstrate knowledge of a real world problem using digital tools.
- 8.2.8.C.8 Develop a proposal for a chosen solution that include models (physical, graphical or mathematical) to communicate the solution to peers.

MA.7.G.B	Solve real-life and mathematical problems involving angle measure, area, surface area, and volume.		
MA.7.G.B.4	Know the formulas for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.		
MA.7.G.B.6	Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.		
MA.G-GMD.A	Explain volume formulas and use them to solve problems		
MA.G-GMD.A.1	Give an informal argument for the formulas for the circumference of a circle, area of a circle, volume of a cylinder, pyramid, and cone.		
MA.G-GMD.A.3	Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems.		
MA.G-GMD.B	Visualize relationships between two-dimensional and three-dimensional objects		
MA.G-GMD.B.4	Identify the shapes of two-dimensional cross-sections of three-dimensional objects, and identify three-dimensional objects generated by rotations of two-dimensional objects.		
MA.G-MG.A	Apply geometric concepts in modeling situations		
MA.G-MG.A.1	Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder).		
MA.G-MG.A.2	Apply concepts of density based on area and volume in modeling situations (e.g., persons per square mile, BTUs per cubic foot).		
MA.G-MG.A.3	apply geometric methods to solve design problems (e.g., designing an object or structure o satisfy physical constraints or minimize cost; working with typographic grid systems eased on ratios).
