Integrated/Cross-Disciplinary Instruction

The first airplane was invented only eleven years before World War I began. The design and manufacturing of airplanes was still very experimental. Students can explore the scientific method and apply it to building paper airplanes in their science classes. Students will gather some baseline information, make one variable and test the results; make another variable and test the results. Next, choose a paper plane design that they believe will

fly the farthest and test the results. Finally, graph the longest and average distances flown for each of the paper plane designs.
