Course Overview

The sixth grade health curriculum increases student's understanding of the physical, social/emotional, and social components in developing and maintaining a healthy lifestyle. The first unit delves into increasing student understanding of goal setting, managing stress, and communicating effectively through all three domains. The next unit focuses primarily on the physical wellness area including understanding nutrition and appropriate physical activity. Units three and four look into the negative health effects that drugs, alcohol, and tobacco can have on a person and how to recognize the signs of substance abuse and addiction. Unit 5 helps build student understanding of common diseases including how to recognize and attempt to prevent them. Finally, the year is rounded out with a unit on growth and development, helping students gain an understanding of how people grow and mature at different rates.
