

# Unit 1: Algebra B Fundamentals

Content Area: **Mathematics**  
Course(s): **Mathematics**  
Time Period: **Week 1**  
Length: **4 Weeks**  
Status: **Published**

## Unit Overview

---

In this unit, students will review and build upon concepts learned in Algebra A, as these are essential before moving into the Algebra B curriculum. Students will begin by taking a pre-assessment on topics learned in Algebra A, including solving multi-step equations, writing and graphing equations of lines, solving linear inequalities, and solving systems of equations. The results of the pre-assessment will be used to guide the topics and time spent on the review process

## Standards

---

MA.A-SSE.A.1	Interpret expressions that represent a quantity in terms of its context.
MA.A-SSE.A.2	Use the structure of an expression to identify ways to rewrite it. For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$ , thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$ .
MA.A-SSE.B.3	Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.
MA.8.EE.C.7	Solve linear equations in one variable.
MA.8.EE.C.7a	Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$ , $a = a$ , or $a = b$ results (where a and b are different numbers).
MA.8.EE.C.8	Analyze and solve pairs of simultaneous linear equations.
MA.8.EE.C.8a	Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.
MA.8.EE.C.8b	Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection.
MA.8.EE.C.8c	Solve real-world and mathematical problems leading to two linear equations in two variables.
MA.8.F.A.1	Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output.
MA.A-CED.A.1	Create equations and inequalities in one variable and use them to solve problems.
MA.8.F.A.3	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear.
MA.A-CED.A.2	Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.
MA.A-CED.A.3	Represent constraints by equations or inequalities, and by systems of equations and/or

	inequalities, and interpret solutions as viable or nonviable options in a modeling context.
MA.A-CED.A.4	Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations.
MA.A-REI.B.3	Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.
MA.A-REI.C.6	Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.
MA.A-REI.D.10	Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).
MA.A-REI.D.12	Graph the solutions to a linear inequality in two variables as a half plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.

## Essential Questions

---

1. What makes an algebraic algorithm both effective and efficient?
2. How can change be represented mathematically?

## Application of Knowledge and Skills...

---

### Students will know that...

---

- 1. a linear equation can have one solution, no solution, or infinite solutions
- 2. linear inequalities have an infinite number of solutions
- 3. absolute value equations have two solutions
- 4. there are three forms for writing equations of lines: slope-intercept, point-slope, and standard form
- 5. systems of equations can be solved by graphing, substitution, and elimination

### Students will be able to:

---

- A. solve multi-step equations with one, infinite, or no solutions
- B. solve a formula for a specific variable
- C. solve simple and compound linear inequalities
- D. solve absolute value equations
- E. graph linear equations
- F. write equations of lines in slope-intercept, point-slope, and standard form
- G. solve systems of equations using graphing, substitution, and elimination

- H. graph linear inequalities in two variables

## Assessments

---

- Communicator Practice Diagnostic: Other written assessments Students will solve practice problems on communicators to receive immediate feedback
- Daily Warm-Up Problems Diagnostic: Other written assessments Students will complete daily warm-up problems to assess readiness
- Pre-Test Diagnostic: Written Test Students will take a pre-assessment on key concepts learned in Algebra A
- Quiz Formative: Written Test Students will take a quiz on topics needing review as determined by the pre-test
- Ticket to Leave Problems Formative: Other written assessments Students will complete one or two problems to assess knowledge and skills learned during the class period
- Unit Test Summative: Written Test Students will take a test on all material covered in the unit

## Activities

---

### Worksheet Races

Students will work in small groups to solve problems. They will check their answers with the teacher. The goal is to complete all problems accurately and as quickly as possible.

### Math Stations

Students will work cooperatively to solve problems from different units.

- ✖ [Systems Review Activity](#)
- ✖ [Absolute Value Equations Review](#)

## Activities to Differentiate Instruction

---

Mixed-ability grouping

Interactive Smart Board activities

Multi-Step Problem Solving

Math stations

Cooperative learning

Study guides (teacher and student completed)

Modify tests and homework as needed

Modified grading rubrics

Graphic organizers

Communicator response boards

Extended response questions

Challenge and enrichment homework and worksheets

Optional weekly challenge problems

## **Integrated/Cross-Disciplinary Instruction**

---

### **Resources**

---

McDougal Littell Algebra 1 textbook and resource materials

## **21st Century Skills**

---

CRP.K-12.CRP2.1	Career-ready individuals readily access and use the knowledge and skills acquired through experience and education to be more productive. They make connections between abstract concepts with real-world applications, and they make correct insights about when it is appropriate to apply the use of an academic skill in a workplace situation.
CRP.K-12.CRP4.1	Career-ready individuals communicate thoughts, ideas, and action plans with clarity, whether using written, verbal, and/or visual methods. They communicate in the workplace with clarity and purpose to make maximum use of their own and others' time. They are excellent writers; they master conventions, word choice, and organization, and use effective tone and presentation skills to articulate ideas. They are skilled at interacting with others; they are active listeners and speak clearly and with purpose. Career-ready individuals think about the audience for their communication and prepare accordingly to ensure the desired outcome.
CRP.K-12.CRP8.1	Career-ready individuals readily recognize problems in the workplace, understand the nature of the problem, and devise effective plans to solve the problem. They are aware of problems when they occur and take action quickly to address the problem; they thoughtfully investigate the root cause of the problem prior to introducing solutions. They carefully consider the options to solve the problem. Once a solution is agreed upon, they follow through to ensure the problem is solved, whether through their own actions or the actions of others.
CRP.K-12.CRP11.1	Career-ready individuals find and maximize the productive value of existing and new technology to accomplish workplace tasks and solve workplace problems. They are flexible and adaptive in acquiring new technology. They are proficient with ubiquitous technology applications. They understand the inherent risks-personal and organizational-of technology applications, and they take actions to prevent or mitigate these risks.
CRP.K-12.CRP12.1	Career-ready individuals positively contribute to every team, whether formal or informal. They apply an awareness of cultural difference to avoid barriers to productive and positive interaction. They find ways to increase the engagement and contribution of all team members. They plan and facilitate effective team meetings.
