

# Unit 9: Final Exam Review

Content Area: **Mathematics**  
Course(s): **Mathematics**  
Time Period: **Week 37**  
Length: **3 Weeks**  
Status: **Published**

## Unit Overview

---

In this unit, students will review for the Algebra 1A Final Exam. Review for the exam will include guided and independent practice. Students will participate in other review activities such as games and stations.

## Standards

---

|               |  |
|---------------|--|
| MA.F-BF.A.1   | Write a function that describes a relationship between two quantities.   |
| MA.F-IF.C.7   | Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.  |
| MA.F-IF.C.8   | Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.  |
| MA.F-IF.C.7a  | Graph linear and quadratic functions and show intercepts, maxima, and minima.  |
| MA.A-APR.A.1  | Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.   |
| MA.A-APR.D.6  | Rewrite simple rational expressions in different forms; write $a(x)/b(x)$ in the form $q(x) + r(x)/b(x)$ , where $a(x)$ , $b(x)$ , $q(x)$ , and $r(x)$ are polynomials with the degree of $r(x)$ less than the degree of $b(x)$ , using inspection, long division, or, for the more complicated examples, a computer algebra system. |
| MA.A-APR.D.7  | Understand that rational expressions form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division by a nonzero rational expression; add, subtract, multiply, and divide rational expressions.   |
| MA.A-CED.A.1  | Create equations and inequalities in one variable and use them to solve problems.  |
| MA.A-CED.A.2  | Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.  |
| MA.A-CED.A.3  | Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or nonviable options in a modeling context.   |
| MA.A-CED.A.4  | Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations.  |
| MA.A-REI.A.2  | Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.   |
| MA.A-REI.B.3  | Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.   |
| MA.A-REI.B.4  | Solve quadratic equations in one variable.   |
| MA.A-REI.B.4a | Use the method of completing the square to transform any quadratic equation in $x$ into an equation of the form $(x - p)^2 = q$ that has the same solutions. Derive the quadratic formula from this form.  |

|               |  |
|---------------|--|
| MA.A-REI.B.4b | Solve quadratic equations by inspection (e.g., for $x^2 = 49$ ), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as $a \pm bi$ for real numbers $a$ and $b$ .   |
| MA.A-REI.C.5  | Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.  |
| MA.A-REI.C.6  | Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.   |
| MA.A-REI.D.10 | Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).  |
| MA.A-REI.D.11 | Explain why the $x$ -coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$ ; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions. |
| MA.A-REI.D.12 | Graph the solutions to a linear inequality in two variables as a half plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.  |
| MA.A-SSE.A.1  | Interpret expressions that represent a quantity in terms of its context.   |
| MA.A-SSE.A.2  | Use the structure of an expression to identify ways to rewrite it. For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$ , thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$ .   |
| MA.A-SSE.A.1a | Interpret parts of an expression, such as terms, factors, and coefficients.  |
| MA.A-SSE.A.1b | Interpret complicated expressions by viewing one or more of their parts as a single entity.  |
| MA.A-SSE.B.3  | Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.   |
| MA.A-SSE.B.3a | Factor a quadratic expression to reveal the zeros of the function it defines.  |
| MA.A-SSE.B.3b | Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.   |
| MA.A-SSE.B.3c | Use the properties of exponents to transform expressions for exponential functions.  |

## Essential Questions

---

1. How does algebra assist in making decisions?
2. How is algebra used in real-world applications?

## Application of Knowledge and Skills...

---

### Students will know that...

---

A. equations can be solved by using properties of equality.

- B. linear equations have three forms (slope-intercept, point-slope, and standard).
- C. systems of equations can be solved using graphing, substitution, and elimination methods.
- D. polynomials can be factored using different methods.
- E. quadratic equations can be solved using the following methods: factoring, taking square roots, completing the square, and the quadratic formula.
- F. radicals are simplified when there are no perfect square factors under the radical and no fractions contained in the radical.
- G. rational expressions can contain restrictions and rational equations may contain extraneous solutions.

### **Students will be able to:**

---

1. solve linear equations.
2. write linear equations.
3. solve systems of equations.
4. factor polynomials.
5. simplify radical expressions and solve radical equations.
6. solve quadratic equations.
7. simplify rational expressions and solve rational equations.

### **Assessments**

---

#### Pre-Assessment

Diagnostic: Other written assessments

Students will take a pre-assessment in order to plan for the topics that will be reviewed during this unit. Results of this pre-assessment as well as student input will guide the teacher in judging the time needed for each topic.

#### Daily Warm-Up Problems

Diagnostic: Other written assessments

Students will complete daily warm-up problems on different review topics.

Communicator Practice  
Diagnostic: Other written assessments

Students will solve practice problems on communicators to receive immediate feedback.

Ticket to Leave Problems  
Formative: Other written assessments

Students will complete one or two problems to assess knowledge and skills learned during the class period.

Algebra IA Final Exam  
Summative: Written Test

Students will take the Algebra IA Final Exam provided by Watchung Hills Regional High School. This test will cover all material in this course. Students must receive a qualifying score in order to move on to the next course.

- [M&M Mixture Project](#)
- [M&M Mixture Project Walking Tour Worksheet](#)

## **Activities**

---

### Worksheet Races

Students will complete practice problems in groups.

### Math Stations

Students will work in different review stations to cooperatively practice problems.

### Student-Led Lessons

Students will work cooperatively to present a review topic to the class.

## **Activities to Differentiate Instruction**

---

Mixed-ability grouping

Interactive Smart Board activities

Multi-Step Problem Solving

Math stations

Cooperative learning

Study guides (teacher and student completed)

Modify homework as needed

Graphic organizers

Communicator response boards

Extended response questions

Challenge and enrichment homework and worksheets

Optional weekly challenge problems

## **Integrated/Cross-Disciplinary Instruction**

---

### **Resources**

---

McDougal Littell Algebra 1 textbook and resource materials

## 21st Century Skills

---

|                  |  |
|------------------|--|
| CRP.K-12.CRP2.1  | Career-ready individuals readily access and use the knowledge and skills acquired through experience and education to be more productive. They make connections between abstract concepts with real-world applications, and they make correct insights about when it is appropriate to apply the use of an academic skill in a workplace situation.  |
| CRP.K-12.CRP4.1  | Career-ready individuals communicate thoughts, ideas, and action plans with clarity, whether using written, verbal, and/or visual methods. They communicate in the workplace with clarity and purpose to make maximum use of their own and others' time. They are excellent writers; they master conventions, word choice, and organization, and use effective tone and presentation skills to articulate ideas. They are skilled at interacting with others; they are active listeners and speak clearly and with purpose. Career-ready individuals think about the audience for their communication and prepare accordingly to ensure the desired outcome. |
| CRP.K-12.CRP8.1  | Career-ready individuals readily recognize problems in the workplace, understand the nature of the problem, and devise effective plans to solve the problem. They are aware of problems when they occur and take action quickly to address the problem; they thoughtfully investigate the root cause of the problem prior to introducing solutions. They carefully consider the options to solve the problem. Once a solution is agreed upon, they follow through to ensure the problem is solved, whether through their own actions or the actions of others.   |
| CRP.K-12.CRP11.1 | Career-ready individuals find and maximize the productive value of existing and new technology to accomplish workplace tasks and solve workplace problems. They are flexible and adaptive in acquiring new technology. They are proficient with ubiquitous technology applications. They understand the inherent risks-personal and organizational-of technology applications, and they take actions to prevent or mitigate these risks.   |
| CRP.K-12.CRP12.1 | Career-ready individuals positively contribute to every team, whether formal or informal. They apply an awareness of cultural difference to avoid barriers to productive and positive interaction. They find ways to increase the engagement and contribution of all team members. They plan and facilitate effective team meetings.   |
