# **04 Topic: Rational Expressions & Complex Numbers**

Content Area: Mathematics
Course(s): Algebra 2
Time Period: Semester 1
Length: 2-3 weeks
Status: Published

#### **Standards**

MA.N-CN.A.1 Know there is a complex number i such that  $i^2 = -1$ , and every complex number has the

form a + bi with a and b real.

MA.N-CN.A.2 Use the relation  $i^2 = -1$  and the commutative, associative, and distributive properties to

add, subtract, and multiply complex numbers.

MA.N-CN.C.7 Solve quadratic equations with real coefficients that have complex solutions.

MA.A-APR.D.7 Understand that rational expressions form a system analogous to the rational numbers,

closed under addition, subtraction, multiplication, and division by a nonzero rational

expression; add, subtract, multiply, and divide rational expressions.

## **Enduring Understandings**

1. Mathematics is a language consisting of symbols and rules.

- 2. The same mathematical ideas can be represented concretely or symbolically.
- 3. There can be different strategies to solve a problem, but some are more effective and efficient than others.

# **Essential Questions**

What methods will students use to understand Rational Expressions and Complex Numbers?

What methods will students use to apply mathematical operations to Rational Expressions & Complex Numbers?

# **Knowledge and Skills**

Simplify rational expressions

Add rational expressions

Subtract rational expressions

Multiply rational expressions

Divide rational expressions

Complex rational expressions

### **Transfer Goals**

Using mathematical reasoning and strategic thinking can allow for practical solutions ot many problems.

Often unique vocabulary and implementation methods are needed to solve problems.
