### **Standards**

MA.K-12.2	Reason abstractly and quantitatively.		
MA.N-CN.A.1	Know there is a complex number $i$ such that $i^2$ = -1, and every complex number has the form $a+bi$ with $a$ and $b$ real.		
MA.N-CN.A.2	Use the relation $i^2$ = -1 and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers.		
MA.N-CN.A.3	Find the conjugate of a complex number; use conjugates to find moduli and quotients of complex numbers.		
MA.N-CN.B	Represent complex numbers and their operations on the complex plane.		
MA.A-REI.A.2	Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.		

# **Enduring Understandings**

- 1. Mathematics is a language consisting of symbols and rules.
- 2. The same mathematical ideas can be represented concretely or symbolically.
- 3. There can be different strategies to solve a problem, but some are more effective and efficient than others.

# **Essential Questions**

- 1. Which operations and equivalences will simplify and help me solve the problem?
- 2. How is thinking algebraically different from thinking arithmetically?
- 3. How does explaining my process help me to understand a problem's solution better?
- 4. What is meant by equality?

# **Knowledge and Skills**

- Simplify expressions with i
- Simplify higher powers of i
- Understand Complex Numbers
- Add, Subtract, Multiply, and Divide complex numbers
- Divide and rationalize imaginary and complex number denominators

### **Transfer Goals**

Using mathematical reasoning and strategic thinking can allow for practical solutions ot many problems.

Often unique vocabulary and implementation methods are needed to solve problems.
