18 Topic: Log Applications Copied from: All Algebra 2, Copied on: 02/28/22

Content Area: Mathematics
Course(s): Algebra 2

Time Period: Marking Period 4

Length: **2-3 weeks** Status: **Published**

Standards

MA.K-12.1 Make sense of problems and persevere in solving them.

MA.K-12.4 Model with mathematics.
MA.K-12.6 Attend to precision.

MA.F-LE.A.4 Understand the inverse relationship between exponents and logarithms. For exponential

models, express as a logarithm the solution to ab to the ct power = d where a, c, and d are numbers and the base b is 2, 10, or e; evaluate the logarithm using technology.

Enduring Understandings

1. Mathematics is a language consisting of symbols and rules.

- 2. The same mathematical ideas can be represented concretely or symbolically.
- 3. There can be different strategies to solve a problem, but some are more effective and efficient than others.

Essential Questions

How will the student solve log equations?

How will the student use the Change of Base Formula?

How will the student get a log equation into calculator ready form?

How will the student solve Log word problems?

How will the student solve Exponential Growth and Decay problems?

How will the student solve Compound Interest problems?

Knowledge and Skills

Use Change of Base formula

Understand and Use TI-83 calculator

Understand and Use Calculator ready form

Solve compound interest, exponential growth, and decay problems
