# **Standards**

MA.K-12.4 Model with mathematics.

MA.F-IF.C.7a Graph linear and quadratic functions and show intercepts, maxima, and minima.

MA.A-CED.A.2 Create equations in two or more variables to represent relationships between quantities;

graph equations on coordinate axes with labels and scales.

MA.F-LE.B.5 Interpret the parameters in a linear or exponential function in terms of a context.

MA.A-REI.D.10 Understand that the graph of an equation in two variables is the set of all its solutions

plotted in the coordinate plane, often forming a curve (which could be a line).

# **Enduring Understandings**

- 1. Mathematics is a language consisting of symbols and rules.
- 2. The same mathematical ideas can be represented concretely or symbolically.
- 3. There can be different strategies to solve a problem, but some are more effective and efficient than others.

# **Essential Questions**

- 1. Which operations and equivalences will simplify and help me solve the problem?
- 2. How is thinking algebraically different from thinking arithmetically?
- 3. How does explaining my process help me to understand a problem's solution better?
- 4. What is meant by equality?

# **Knowledge and Skills**

Define and find Slope

Define and find Midpoint

Define and find distance between 2 points

Graph a line

Write the equation of a line in Standard Form, Slope-intercept, and Point-Slope

Find the x and y intercepts of a line

Determine if 2 lines are parallel, perpendicular, or neither

## **Transfer Goals**

Using mathematical reasoning and strategic thinking can allow for practical solutions ot many problems.

Often unique vocabulary and implementation methods are needed to solve problems.
