TEC.9-12.8.1.12.F.1	Select and use specialized databases for advanced research to solve real world problems.
TEC.9-12.8.2.12.A.1	Design and create a technology product or system that improves the quality of life and identify trade-offs, risks and benefits.
TEC.9-12.8.2.12.B.2	Design and create a prototype for solving a global problem, documenting how the proposed design features affect the feasibility of the prototype through the use of engineering, drawing and other technical methods of illustration.
	Information accessed through the use of digital tools assists in generating solutions and making decisions.

Enduring Understandings

Understandings

Students will understand that …

1. Engineers and technicians use Circuit Design Software to enter and synthesize digital designs into programmable logic devices.
2. Programmable Logic Devices can be used to implement combinational logic circuits.
3. Circuits implemented with programmable logic devices require significantly less wiring than discrete logic, but they typically require a dedicated printed circuit board to hold the device.
4. Programmable logic devices can be used to implement any combinational logic circuits but are best suited for larger, more complex designs.

Essential Questions

Students will keep considering …

1. How is the design process impacted by use of Circuit Design Software (CDS) and Programmable Logic Devices (PLDs)?
2. How are programmable logic devices used to implement combinational logic circuits?
3. Describe the advantages and disadvantages of using a programmable logic device over discrete logic gates.
