# **Unit 17: Sequences and Series**

Content Area: Mathematics
Course(s): PreCalc Trig A
Time Period: Semester 2
Length: 3 weeks
Status: Published

#### **Standards**

MA.F-IF.A.1 Understand that a function from one set (called the domain) to another set (called the

range) assigns to each element of the domain exactly one element of the range. If f is a

function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).

MA.F-IF.A.2 Use function notation, evaluate functions for inputs in their domains, and interpret

statements that use function notation in terms of a context.

MA.F-IF.A.3 Recognize that sequences are functions, sometimes defined recursively, whose domain is

a subset of the integers.

### **Enduring Understandings**

Patterns can be reprsented through adding a common difference or multiplying a value.

Repeated addition can follow similar rules by being a series.

# **Essential Questions**

What is the difference between arithmetic and geometric sequences?

What is a series?

What is sigma notation?

How do you identify if a scenario requires a geometric or arithmetic sequence or series?

## **Knowledge and Skills**

- Evaluate an arithmetic sequence.
- Apply properties of an arithmetic/geometric sequence.
- Identify what types of geometric series converge and what they converge to.

# **Transfer Goals**

Understanding them echanics of a problem allows for proper execution of a technique to solve it.

#### Resources

- 1. Pre-Calculus with Limits Aufmann
- 2. Trigonometry 6th edition Lial
- 3. Classkick
- 4. Khan Academy
- 5. PurpleMath
- 6. KutaSoftware
- 7. CK-12
- 8. Quizlet
- 9. Albert I/O
- 10. Desmos
- 11. Problem Attic
