- Various hardware to be used may include, but will not be limited to, audio interfaces, microphones, different types of cable, and direct boxes.
- Various software to be used may include, but will not be limited to, digital audio workstation and sequencing applications, plugins, and virtual instruments.
- Concepts will include connecting hardware appropriate for a particular recording session, adding and arming tracks, recording audio, adding effects, mixing tracks, and more.
- The students will understand how the hardware and software interacts and ultimately have the ability to produce an audio project.

Enduring Understanding

- How to use various hardware used in recording audio.
- How to use various software used in recording audio.
- Concepts of audio production using such hardware and software.
- It is important to have knowledge of the hardware, software, concepts, and practical use of the digital audio workstation to create a product viable for consumption by the intended audience.

Essential Questions

- What hardware is used for digital recording?
- What software is used for digital recording?
- How does the hardware and software work together?
- What concepts are used in the creation of a recording using this hardware and software?
- How can this knowledge help me in my life outside of the classroom?
- How does the knowledge of the digital audio workstation aid me in understanding the creation of music and other audio that I and others consume?

Exit Skills

By the end of Unit Two:

- All students will demonstrate an understanding of the digital audio workstation by:
 - Taking quizzes on the hardware, software, concepts, and practical use of the digital audio workstation
 - Connecting all hardware appropriate for a recording session.
 - Creating tracks in software, arming them for recording, and creating a recording on a track-by-track basis.
 - Adding effect plugins and virtual instruments.
 - Mixing tracks together in a cohesive manner.
