Unit Overview

Unit 2 examines:

- Europeans developed a variety of colonization and migration patterns, influenced by different imperial goals, cultures, and the varied North American environments where they settled, and they competed with each other and American Indians for resources.
- Spanish, French, Dutch, and British colonizers had different economic and imperial goals involving land and labor that shaped the social and political development of their colonies as well as their relationships with native populations.
- In the 17th century, early British colonies developed along the Atlantic coast, with regional differences that reflected various environmental, economic, cultural, and demographic factors
- Competition over resources between European rivals and American Indians encouraged industry and trade and led to conflict in the Americas.
- The British colonies participated in political, social, cultural, and economic exchanges with Great Britain that encouraged both stronger bonds with Britain and resistance to Britain's control.
- Transatlantic commercial, religious, philosophical, and political exchanges led residents of the British colonies to evolve in their political and cultural attitudes as they became increasingly tied to Britain and one another.
- Like other European empires in the Americas that participated in the Atlantic slave trade, the English colonies developed a system of slavery that reflected the specific economic, demographic, and geographic characteristics of those colonies.

Enduring Understanding

- Migration and Settlement: Push and pull factors shape immigration to and migration within America, and the demographic change as a result of these moves shapes the migrants, society, and the environment.
- Geography and the Environment: Geographic and environmental factors, including competition over and debates about natural resources, shape the development of America and foster regional diversity. The development of America impacts the environment and reshapes geography, which leads to debates about environmental and geographic issues.
- Work, Exchange, and Technology: The interplay between markets, private enterprise, labor, technology, and government policy shape the American economy. In turn, economic activity shapes society and government policy and drives technological innovation.
- America in the World WOR Diplomatic, economic, cultural, and military interactions between empires, nations, and peoples shape the development of America and America's increasingly important role in the world.
- Social Structures: Social categories, roles, and practices are created, maintained, challenged, and transformed throughout American history, shaping government policy, economic systems, culture, and the lives of citizens.
- American and Regional Culture : Creative expression, demographic change, philosophy, religious beliefs, scientific ideas, social mores, and technology shape national, regional, and group cultures in America, and these varying cultures often play a role in shaping government policy and developing economic systems.
- American and National Identity NAT The development of and debates about democracy, freedom, citizenship, diversity, and individualism shape American national identity, cultural values, and beliefs about American exceptionalism, and in turn, these ideas shape political institutions and society. Throughout American history, notions of national identity and culture have coexisted with varying degrees of regional and group identities.
