# Mathematics <br> Grade 6 Accelerated <br> Unit 3 

Belleville Board of Education
102 Passaic Avenue
Belleville, NJ 07109

Dr. Richard Tomko, Superintendent of Schools
Mr. Thomas D'Elia, Director of Curriculum and Instruction
Ms. Diana Kelleher, District Supervisor of ELA/Social Studies
Mr. George Droste, District Supervisor of Math/Science

Board Approved: August 24, 2015
Board Approved Revisions: August 22, 2016

## Unit Overview

In this unit, students will:

- Identify variables, constants, coefficients, terms
- Write and evaluate numerical expressions involving whole number exponents (order of operations)
- Read, write, and evaluate expressions in which letters represent the value of numbers
- Write equations describing problem situations
- Solve word problems using algebraic expressions
- Simplify algebraic expressions using distributive properties
- Identify equivalent expressions
- Understand and solve equations and inequalities
- Use variables, expressions, and inequalities and equations to solve real world problems
- Use multiple representations of problems to evaluate
- Combine like terms
- Determine if expressions are equivalent using tables and graphs

Expressions and Equations
Apply and extend previous understandings of arithmetic to algebraic expressions.
Write and evaluate numerical expressions involving whole-number exponents.
Write, read, and evaluate expressions in which letters stand for numbers.
Apply the properties of operations to generate equivalent expressions.
Identify when two expressions are equivalent (i.e., when the two expressions name the same number regardless of which value is substituted into them).

Write expressions that record operations with numbers and with letters standing for numbers.

Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity.
Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real-world problems. Perform arithmetic operations, including those involving whole number exponents, in the conventional order when there are no parentheses to specify a particular order (Order of Operations).

Reason about and solve one-variable equations and inequalities.
Understand solving an equation or inequality as a process of answering a question: which values from a specified set, if any, make the equation or inequality true? Use substitution to determine whether a given number in a specified set makes an equation or inequality true.

Use variables to represent numbers and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set.
Solve real-world and mathematical problems by writing and solving equations of the form $x+p=q$ and $p x=q$ for cases in which $p, q$ and $x$ are all nonnegative rational numbers.
Write an inequality of the form $x>c$ or $x<c$ to represent a constraint or condition in a real- world or mathematical problem. Recognize that inequalities of the form $x>c$ or $x<c$ have infinitely many solutions; represent solutions of such inequalities on number line diagrams.

Represent and analyze quantitative relationships between dependent and independent variables.

Use variables to represent two quantities in a real-world problem that change in relationship to one another; write an equation to express one quantity, thought of as the dependent variable, in terms of the other quantity, thought of as the independent variable. Analyze the relationship between the dependent and independent variables using graphs and tables, and relate these to the equation.

## Exit Skills

By the end of this unit, 6th grade students should:

- Write, interpret, and use expressions and equations:

Students understand the use of variables in mathematical expressions. They write expressions and equations that correspond to given situations, evaluate expressions, and use expressions and formulas to solve problems. Students understand that expressions in different forms can be equivalent, and they use the properties of operations to rewrite expressions in equivalent forms. Students know that the solutions of an equation are the values of the variables that make the equation true. Students use properties of operations and the idea of maintaining the equality of both sides of an equation to solve simple one-step equations. Students construct
and analyze tables, such as tables of quantities that are in equivalent ratios, and they use equations (such as $3 x$ $=y$ ) to describe relationships between quantities.

## Enduring Understanding

- An algebraic expression is a mathematical phrase involving at least one variable, an operation, and sometimes numbers
- Variables are letters used to represent quantities and can be used to represent values or quantities that change
- An expression is a mathematical sentence that does NOT contain an equal sign, an equation does contain an equal sign
- Exponential notation is a way to express repeated products of the same number
- Algebraic expressions may be used to represent mathematical problems and in real world situations
- Algebraic properties can be used to create equivalent expressions
- Two equivalent expressions form an equation
- PEMDAS is used for order of operations

## Essential Questions

- How are standard form and exponential form related?
- What is the purpose of an exponent?
- How are exponents used when evaluating expressions?
- How is the order of operations used to evaluate expressions?
- How is an expression different from an equation?
- How are properties of numbers helpful in evaluating expressions?
- What strategies can one use to help understand and represent real situations using algebraic expressions?
- How is distributive property used to evaluate, simplify, and expand expressions?
- How can one tell if two expressions are equal?

## Learning Objectives

Students will be able to:

- Understand the use of variables in mathematical expressions
- Write expressions and equations that correspond to given situations
- Evaluate expressions and use expressions and formulas to solve problems
- Understand that expressions in different form can be equivalent
- Use the properties of operations to rewrite expressions in equivalent forms
- Solve one-step and two-step equations
- Construct and analyze tables and graphs that are in equivalent ratios
- Apply equations to describe relationships between quantities

## Action Verbs

Below are examples of action verbs associated with each level of the Revised Bloom's Taxonomy. These are useful in writing learning objectives, assignment objectives and exam questions.

If you are utilizing the objective, but want to use rigor, use the chart below.

| Remember | Understand | Apply | Analyze | Evaluate | Create |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Choose | Classify | Choose | Categorize | Appraise | Combine |
| Describe | Defend | Dramatize | Classify | Judge | Compose |
| Define | Demonstrate | Explain | Compare | Criticize | Construct |
| Label | Distinguish | Generalize | Differentiate | Defend | Design |
| List | Explain | Judge | Distinguish | Compare | Develop |
| Locate | Express | Organize | Identify | Assess | Formulate |
| Match | Extend | Paint | Infer | Conclude | Hypothesize |
| Memorize | Give Examples | Prepare | Point out | Contrast | Invent |
| Name | Illustrate | Produce | Select | Critique | Make |
| Omit | Indicate | Select | Subdivide | Determine | Originate |
| Recite | Interrelate | Show | Survey | Grade | Organize |
| Select | Interpret | Sketch | Arrange | Justify | Plan |
| State | Infer | Solve | Breakdown | Measure | Produce |
| Count | Match | Use | Combine | Rank | Role Play |
| Draw | Paraphrase | Add | Detect | Rate | Drive |
| Outline | Represent | Calculate | Diagram | Support | Devise |
| Point | Restate | Change | Discriminate | Test | Generate |
| Quote | Rewrite | Classify | Illustrate |  | Integrate |
| Recall | Select | Complete | Outline |  | Prescribe |
| Recognize | Show | Compute | Point out |  | Propose |
| Repeat | Summarize | Discover | Separate |  | Reconstruct |
| Reproduce | Tell | Divide <br> Examine |  |  | Revise Rewrite |
|  | Associate | Graph |  |  | Transform |
|  | Compute | Interpolate |  |  |  |
|  | Convert | Manipulate |  |  |  |
|  | Discuss | Modify |  |  |  |
|  | Estimate | Operate |  |  |  |
|  | Extrapolate | Subtract |  |  |  |
|  | Generalize |  |  |  |  |
|  | Predict |  |  |  |  |

## Interdisciplinary Connections

- Science
- Social Studies
- Health/Nutrition
- Music

## Alignment to 21st Century Skills \& Technology

Key SUBJECTS AND 21st CENTURY THEMES
Mastery of key subjects and 21 st century themes is essential for all students in the 21 stcentury.
Key subjects include:

- English, reading or language arts
- World languages
- Arts
- Mathematics
- Economics
- Science
- Geography
- History
- Government and Civics

## 21st Century/Interdisciplinary Themes

- Civic Literacy
- Environmental Literacy
- Financial, Economic, Business and Entrepreneurial Literacy
- Global Awareness
- Health Literacy

## 21st Century Skills

- Communication and Collaboration
- Creativity and Innovation
- Critical thinking and Problem Solving
- ICT (Information, Communications and Technology) Literacy
- Information Literacy
- Life and Career Skills
- Media Literacy

## Technology Infusion

What technology can be used in this unit to enhance learning?
Win 8.1 Apps/Tools Pedagogy Wheel

## Differentiation

- Pre-teach new vocabulary and meaning of symbols
- Connect new vocabulary and symbols to background knowledge and experience
- Break down terms to familiar parts, suffixes, and prefixes
- Make dictionaries available to learners
- Increase experience to academic vocabulary and language
- Provide flash cards
- Incorporate as many learners' senses as possible to enhance retention
- Brainstorm examples of use of new terms or symbols make real world applications
- Engage student in relevant discussion about conceptual process
- Post and refer to math guides and anchor charts when applicable
- Clarify the relationships between the operations
- Develop graphic representations of math processess
- Make connections to formula, concepts, or structures previously learned
- Utilize manipulatives to display structures
- Offer various ways to solve math problems
- Provide opportunities to integrate math, technology, and art
- Provide graphic organizers and anchor charts for all symbols and formula
- Create math journals for terms, formula, and symbols
- Develop interactive games and activities to promote retention
- Integrate videos
- Utilize graphics, diagrams, and charts

## Special Education

- printed copy of board work/notes provided
- additional time for skill mastery
- assistive technology
- behavior management plan
- check work frequently for understanding
- computer or electronic device utilizes
- extended time on tests/ quizzes
- have student repeat directions to check for understanding
- highlighted text visual presentation
- modified assignment format
- modified test content
- modified test format
- modified test length
- multiple test sessions
- multi-sensory presentation
- preferential seating
- preview of content, concepts, and vocabulary
- reduced/shortened reading assignments
- Reduced/shortened written assignments
- secure attention before giving instruction/directions
- shortened assignments
- student working with an assigned partner
- teacher initiated weekly assignment sheet
- Use open book, study guides, test prototypes

## ELL

- teaching key aspects of a topic. Eliminate nonessential information
- using videos, illustrations, pictures, and drawings to explain or clarif
- allowing products (projects, timelines, demonstrations, models, drawings, dioramas, poster boards, charts, graphs, slide shows, videos, etc.) to demonstrate student's learning;
- allowing students to correct errors (looking for understanding)
- allowing the use of note cards or open-book during testing
- having peers take notes or providing a copy of the teacher's notes
- modifying tests to reflect selected objectives
- providing study guides
- tutoring by peers

## Intervention Strategies

- allowing students to correct errors (looking for understanding)
- teaching key aspects of a topic. Eliminate nonessential information
- allowing products (projects, timelines, demonstrations, models, drawings, dioramas, poster boards, charts, graphs, slide shows, videos, etc.) to demonstrate student's learning
- allowing students to select from given choices
- allowing the use of note cards or open-book during testing
- collaborating (general education teacher and specialist) to modify vocabulary, omit or modify items to reflect objectives for the student, eliminate sections of the test, and determine how the grade will be determined prior to giving the test.
- decreasing the amount of workpresented or required
- having peers take notes or providing a copy of the teacher's notes
- marking students' correct and acceptable work, not the mistakes
- providing study guides
- reducing the number of answer choices on a multiple choice test
- tutoring by peers
- using authentic assessments with real-life problem-solving
- using videos, illustrations, pictures, and drawings to explain or clarify

## Evidence of Student Learning-CFU's

Please list ways educators may effectively check for understanding in this secion.

- Admit Tickets
- Anticipation Guide
- Common benchmarks
- Compare \& Contrast
- Create a Multimedia Poster
- Define
- Describe
- Evaluate
- Evaluation rubrics
- Exit Tickets
- Explaining
- Fist- to-Five or Thumb-Ometer
- Illustration
- Journals
- Newspaper Headline
- Outline
- Question Stems
- Quickwrite
- Quizzes
- Self- assessments
- Socratic Seminar
- Study Guide
- Teacher Observation Checklist
- Think, Pair, Share
- Think, Write, Pair, Share
- Top 10 List
- Unit tests
