Unit Overview

Unit 2 examines:

- The United States began to develop a modern democracy and celebrated a new national culture, while Americans sought to define the nation's democratic ideals and change their society and institutions to match them.
- Innovations in technology, agriculture and commerce powerfully accelerated the American economy, precipitating profound changes to US society and to national and regional identities.
- The US interest in increasing foreign trade and expanding its national borders shaped the nation's foreign policy and spurred government and private initiatives.

Enduring Understanding

- There was continuing debate over the power of the national government versus states' rights.
- The economic and social systems of the north, south, and west became more pronounced and slavery, more entrenched.
- The Second Great Awakening believed in the perfectibility of man and, thus, was a catalyst for many reform movements.
- Americans attempted to develop a culture of their own-free from the domination of European constraints.
- The Napoleonic Wars led to increased confrontation with France and Britain and eventually led to the War of 1812.
- Advances in technology promoted the development of the First Industrial Revolution and an increasing market economy, which altered family and gender relationships, as well as migration patterns of groups of people.
- Improved transportation systems allowed for greater access to natural resources, markets and western lands.
- The United States doubled its size and sought to dominate the North American continent by military, diplomatic and demographic means.
- The Supreme Court under Chief Justice John Marshall asserted federal power over state laws.
- The American System of Henry Clay sought to establish a more unified national market economy through the creation of a Second Bank of the United States and enactment of a protective tariff and federally funded internal improvements.
- Improved transportation aided in the movement of goods and people.
- Improved transportation systems allowed for greater access to natural resources, markets and western lands.
- Trade and trapping became important in the Far West, leading to a better understanding of the environment.
- The United States sought dominance over not only the North American continent, but sought to extend its influence into Latin America with the Monroe Doctrine.
- The geographic growth of the United States led to controversy over the expansion of slavery into new territories and increased conflict with Native Americans.
- The Jacksonian Era saw the emergence of the Second American Party System, with the Democrats and Whigs being the two major parties.
- The political system became much more democratic during the Jacksonian Ear.
- Debate over the power of the federal government versus states' rights flared into a direct challenge to federal authority economically and politically.
- The American System of Henry Clay sought to establish a national market economy, but resulted in increased sectional tension.
- In their desire for land, whites continued to encroach into Native American lands, which ultimately led to the removal of eastern tribes, including the "five civilized tribes," to west of the Mississippi River.
- Improved transportation systems allowed for greater access to natural resources, markets and western lands.
- Regional economic and social differences led to greater sectional controversy.
- Industrialization increased sectional differences, which led to varied expectations on the role of government in the economy.
- Growth in advanced technology and industrialization led to a rapidly expanding middle class, while also increasing the disparity of wealth between the rich and the poor.
- Improvements in transportation systems tied the Northeast and Northwest more closely together, both economically and socially.
- The agricultural and transportation revolutions improved the geographic mobility of the American

people, enriched diets and allowed settlement in growing urban industrial areas.

- The factory system led to the need for an increased labor supply that was increasingly met by native-born women and immigrants.
- Industrialization and the factory system transformed gender and family roles, and increased the separation between home and the workplace.
- Natural population growth was aided by increasing immigration from Europe, which led to rising nativist sentiment.

Essential Questions

- The nation's transition to a more participatory democracy was achieved by expanding suffrage from a system based on property ownership to one based on voting by all adult white men, and it was accompanied by the growth of political parties.
- While Americans embraced a new national culture, various groups developed distinctive cultures of their own.
- Increasing numbers of Americans, many inspired by new religious and intellectual movements, worked primarily outside of government institutions to advance their ideals.
- New transportation systems and technologies dramatically expanded manufacturing and agricultural production.
- The changes caused by the market revolution had significant effects on US society, workers' lives, and gender/family relations.
- Economic development shaped settlement and trade patterns, helping to unify the nation while also encouraging the growth of different regions.
- Struggling to create an independent global presence, the United States sought to claim territory throughout the North American continent and promote foreign trade.
- The United States' acquisition of lands in the West gave rise to contests over the extension of slavery into new territories.
