Unit Overview

Eggs are a nutritious, inexpensive, and versatile food. Eggs serve a number of functions in recipes: emulsifiers, foams, structure, thickeners, binders, flavor, color, leavening ingredient, and an interfering agent. Eggs are perishable and require careful handling and thorough cooking to protect against foodborne illness. Pasteurized eggs can be substituted for eggs in dishes that call for raw or lightly cooked eggs. Eggs can be prepared in numerous ways and in various dishes utilizing moderate cooking temperatures and carefully monitored cooking times. These factors will prevent egg proteins from shrinking and becoming tough. Principles of egg cookery must be practiced to develop these skills.

- Eggs function as emulsifiers, foaming agent, thickeners, binding agents, and interfering agents. They also add structure, nutrients, flavor, and color to foods.
- Egg foams are used to add air to foods. The stage depends on the beating time: foamy, soft peak and stiff peak.
- Egg substitutes and pasteurized eggs can be used in recipes as substitutes for standard eggs.
- Eggs are protein foods and require moderate cooking temperatures and carefully monitored cooking times.
