## **Unit Overview**

---

Unit eight provides detailed information about Natural Resources and Hazards. The content within the unit explores how renewable and nonrenewable resources are used for energy. The unit focuses on discovering how people can reduce land and water based hazards and their impacts.

## **Enduring Understanding**

---

- A resource helps you live.
- Water, air, trees, wind, fossil fuels, and sunlight are natural resources.
- Crude oil, coal, and natural gas are nonrenewable resources.
- Nonrenewable resources take hundreds of millions of years to form.
- Nonrenewable resources are being used at a much faster rate than they can be replenished.
- Using fossil fuels has some pros and some cons.
- There are potential risks and benefits of using wind, water, and solar energy compared to fossil fuels.
- Renewable resources are the main forms of energy used before the 20th century.
- Natural hazards can threaten people and property.
- Technology can help keep people safe from natural hazards.
- Some of the natural processes of Earth's surface, its oceans, and its atmosphere can produce water-based hazards.

## **Essential Questions**

---

- What nonrenewable resources are used for energy?
- What are the effects of using nonrenewable resources?
- What renewable resources are used for energy?
- What are the potential risks and benefits of using wind, water, and solar energy compared to fossil fuels?
- What is the difference between a renewable and nonrenewable resource?
- How can people reduce the impact of land-based hazards?
- How can people stay safe during natural hazards
- What are the effects of natural hazards?
- How can people reduce the impact of water-based hazards?
- How can people stay safe during water-based hazards?

## **Exit Skills**

---

**By the end of Grade 4, Science Unit 8, the student should be able to:**

- Ask questions and define problems
