Interdisciplinary Connections

SCI.1-ESS1-2

Make observations at different times of year to relate the amount of daylight to the time of year.

Assessment is limited to relative amounts of daylight, not quantifying the hours or time of daylight.

Emphasis is on relative comparisons of the amount of daylight in the winter to the amount in the spring or fall.

Some materials allow light to pass through them, others allow only some light through and others block all the light and create a dark shadow on any surface beyond them, where the light cannot reach. Mirrors can be used to redirect a light beam.

Seasonal patterns of sunrise and sunset can be observed, described, and predicted.
