

# 6 Math Unit 01: Numerical Expressions & Factors

Content Area: **Mathematics**  
Course(s):  
Time Period: **September**  
Length: **13 days**  
Status: **Published**

## Unit Overview

---

In this chapter, students will extend their knowledge from prior courses. It is important for students to become secure in this content, so the foundation is set for completing computational work with fractions and decimals in the next chapter.

## Standards

---

MATH.6.NS.B.4	Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 12. Use the distributive property to express a sum of two whole numbers 1–100 with a common factor as a multiple of a sum of two whole numbers with no common factor.  For example, express $36 + 8$ as $4(9 + 2)$ .
MATH.6.EE.A.1	Write and evaluate numerical expressions involving whole-number exponents.

## **Interdisciplinary Connections**

---

**Topic 1 STEM Project - Improve Your School** - In this project, students are introduced to the science of engineering. They learn about the ways that engineers solve problems to improve products. Students begin to think like engineers and identify needed improvements around their school.

**Science Connection** - Students engage in the first steps of the engineering design process by defining a problem in terms of needed improvements. They recognize how societal needs and the ways in which humans interact with the physical world determine constraints and limitations on possible solutions.

ideas and expressing their own clearly.

SCI.MS-ETS1-1

Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.
