Unit Overview

Chapter Two reviews multiplying and dividing fractions and decimals. Then students will investigate multiplication and division of integers and then they will apply that understanding to rational numbers.

Standards

MATH.7.NS.A.2.a	Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1) = 1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts.
MATH.7.NS.A.2.b	Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $-(p/q) = (-p)/q = p/(-q)$. Interpret quotients of rational numbers by describing real-world contexts.
MATH.7.NS.A.2.c	Apply properties of operations as strategies to multiply and divide rational numbers.
MATH.7.NS.A.2.d	Convert a rational number to a decimal using long division; know that the decimal form of a rational number terminates in 0s or eventually repeats.
MATH.7.NS.A.3	Solve real-world and mathematical problems involving the four operations with rational numbers.

Interdisciplinary Connections

Topic 2 STEM Project - An Essential Resource

In this project, students design a large water collection and retention tub and then propose methods for transporting the water from the tub to villages in need of water. They apply their understanding of ratio and proportionality to determine water needs and an equitable distribution of water among the villages.

Science Connection -

Students apply the engineering design process to find possible solutions to the problem identified. They explore ways engineers can provide increased access to clean, fresh water for more people.

ELA: NJLSA.R1. Read closely to determine what the text says explicitly and to make logical inferences and relevant connections from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text.

Science: MS-ETS1-1. Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.

Climate Change:

- **Climate Change:** Students may solve real-world problems involving the four operations with rational

numbers related to the relationship between altitude and the temperature above sea level.

- **Climate Change:** Students may solve multi-step real-life problems posed with positive and negative rational numbers in any form related to the relationship between altitude and the temperature above sea level.
