# 7 Math Unit 06: Percents

Content Area:	Mathematics
Course(s):	
Time Period:	Marking Period 3
Length:	16 days
Status:	Published

## **Unit Overview**

Percents are used to describe proportional relationships and to solve many application problems. Chapter 6 begins with understanding the equivalent representations and converting between percents, decimals and fractions. Application of percents is also focused on.

Standards	
MATH.7.RP.A.3	Use proportional relationships to solve multistep ratio and percent problems.
MATH.7.EE.B.3	Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.

ELA: NJSLSA.R1. Read closely to determine what the text says explicitly and to make logical inferences and relevant connections from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text.

Science: MS-ETS1-1. Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.

Climate Change:

- Climate Change: Students may solve real-world problems involving the four operations with rational numbers related to the relationship between altitude and the temperature above sea level.
- Climate Change: Students may solve multi-step real-life problems posed with positive and negative rational numbers in any form related to the relationship between altitude and the temperature above sea level.
