

8 Math Unit 02: Transformations

Content Area: **Mathematics**
Course(s):
Time Period: **Marking Period 1**
Length: **18 days**
Status: **Published**

Unit Overview

The concepts of congruence and similarity are introduced through the study of transformations. The challenge for students is in visualizing the result of a transformation, the image.

Standards

| | |
|----------------|---|
| MATH.8.G.A.1.a | Lines are transformed to lines, and line segments to line segments of the same length. |
| MATH.8.G.A.1.b | Angles are transformed to angles of the same measure. |
| MATH.8.G.A.1.c | Parallel lines are transformed to parallel lines. |
| MATH.8.G.A.2 | Understand that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them. |
| MATH.8.G.A.3 | Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates. |
| MATH.8.G.A.4 | Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them. |

Interdisciplinary Connections

Topic 2 STEM Project - Modeling Population Growth

In this project, students will explore the science of demography. They will explore how birth rate, death rate, emigration, and immigration affect population growth. Students will analyze how changes in these indicators affect resource sustainability and how resource availability affects population growth.

Science Connection -

Students use mathematical representations to represent population growth and to support arguments about how the changes in population are affected by resource availability and sustainability. They will also analyze how these effects may differ for different communities.

ELA: NJLSA.R1. Read closely to determine what the text says explicitly and to make logical inferences and relevant connections from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text.

Science: MS-ETS1-1. Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.
