Content Area: **Mathematics**
Course(s):
Time Period: **January**
Length: **12 days**
Status: **Published**

Unit Overview

Chapter 5 extends what students have learned about graphing linear equations, solving multi-step equations, and rewriting equations and formulas. These are foundational skills for systems of linear equations.

Standards

MA.8.EE.C.8a	Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.
MA.8.EE.C.8b	Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection.
MA.8.EE.C.8c	Solve real-world and mathematical problems leading to two linear equations in two variables.

Interdisciplinary Connections

Topic 5 STEM Project - Daily Grind

In this project, students investigate the science behind the coffee industry. Students will analyze the factors involved in growing and producing coffee and the effects of coffee growth practices on the economy and environment.

Science Connection -

Students gather evidence and interpret data to describe how resource availability and environmental factors influence the growth of coffee. They will also learn about the effects of the coffee growing and harvesting processes on the environment.

ELA: NJLSA.R1. Read closely to determine what the text says explicitly and to make logical inferences and relevant connections from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text.

Science: MS-ETS1-1. Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.
