Unit Overview

To develop each new volume formula, students explore a connection to a formula they already know. Connecting the similarity of structure of the solids helps students understand how the formulas are related.

Standards

MATH.8.G.C.9	Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.

Interdisciplinary Connections

Topic 8 STEM Project - Wrap It Up!

In this project, students explore how engineers design packaging for water purifiers. They will use the engineer design process to determine an environmentally sound way to package water purifiers, taking into account cost, efficiency and eco-friendly materials to use for packaging.

Science Connection -

Students use the engineering design process, as in Topic 7, to determine possible solutions in an environmentally sound way to package water purifiers. They will gather data, develop and test possible solutions, and redesign if needed.

ELA: NJSLSA.R1. Read closely to determine what the text says explicitly and to make logical inferences and relevant connections from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text.

Science: MS-ETS1-1. Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.

Climate Change:

- **Climate Change:** Students may use the formula for the volume of a sphere to approximate the volume of hailstones to consider how climate change may affect the size of hailstones over time.
