

K Science Unit 1: Weather Patterns (Circle of Seasons)

Content Area: **Science**
Course(s):
Time Period: **Marking Period 2**
Length: **9 Weeks**
Status: **Published**

Unit Overview

In this unit, students gather evidence in order to identify daily and seasonal weather patterns. They use those patterns to explain mysteries like why you might lose your jacket during the day or why birds lay their eggs at certain times of the year.

Standards

Scientific & Engineering Practices

- Students track the weather daily and analyze the data by collecting, recording, and sharing their observations. They act as weather reporters and ask questions based on observations of weather to find out more information about the natural world.
- Students obtain and evaluate information in a series of unnamed drawings of each season. They use clues in the picture to argue for the season they think the picture represents. Next, they use these clues to sequence the seasons in the correct cycle.
- Students develop a bird nest model. They use this model to construct an argument that birds use material around them to change their environment to keep their eggs and baby birds safe.

Crosscutting Concepts

- Students observe weather patterns. They understand temperature changes throughout the day as a pattern in the natural world.
- Students use their observations of the weather in each season to identify patterns. They determine the order of the seasons, and notice the pattern that all four seasons repeat each year.
- Students observe how the structure of a bird nest enables them to function in keeping eggs and baby birds safe.

SCI.K-ESS2-1

Use and share observations of local weather conditions to describe patterns over time.

SCI.K-ESS2-2

Construct an argument supported by evidence for how plants and animals (including humans) can change the environment to meet their needs.
