Unit 7 Rigamajig

Content Area: **Technology**
Course(s):
Time Period: **April**
Length: **4 Days**
Status: **Published**

Unit Overview

The Rigamajig unit is an introduction to large-scale collaborative design using physical objects. While most units in the 2nd grade curriculum are digital, the Rigamajig set allows students to create real-world structures. Students will investigate properties of nut and bolt connectors, angle braces, ropes and pulleys, and other pieces included in the Rigamajig set. During the course of these investigations, students will learn basic mechanical engineering principles, such as the strength of triangle bracing, mechanical advantage through leverage, or design of axles and wheels.

Interdisciplinary Connections

Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in K–2 builds on prior experiences and progresses to the use of evidence and ideas in constructing evidence-based accounts of natural phenomena and designing solutions.

Developing and Using Models

Modeling in K–2 builds on prior experiences and progresses to include using and developing models (i.e., diagram, drawing, physical replica, diorama, dramatization, or storyboard) that represent concrete events or design solutions.
