Content Area: **Mathematics**  
Course(s):  
Time Period: **Marking Period 1**  
Length: **10 days**  
Status: **Published**

## Unit Overview

---

Students are expected to work together on explorations, make conjectures, construct viable arguments, and critique the reasoning of others.

Focus on Major Work Chapter 2:

- presents the skills and understanding related to solving linear inequalities
- connected skills of solving absolute value inequalities

Students will be able to...

- solve simple and multi-step inequalities
- describe how to solve inequalities
- compare and contrast solving inequalities with solving equations
- apply techniques for solving inequalities to solve real-life applications

## Standards

---

MATH.9-12.A.CED.A.1	Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.
MATH.9-12.A.REI.B.3	Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.
MATH.9-12.A.SSE.A.1.a	Interpret parts of an expression, such as terms, factors, and coefficients.

### **Interdisciplinary Connections**

---

ELA: NJSLSA.R1. Read closely to determine what the text says explicitly and to make logical inferences and relevant connections from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text.

Science: MS-ETS1-1. Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.

Climate Change:

- Climate Change: Students may use units to guide the solution of multi-step problems about how variations in the flow of energy into and out of the Earth's systems result in climate change. Note: Changes in climate are limited to changes in surface temperatures, precipitation patterns, glacial ice volumes, sea levels, and biosphere distribution.
- Climate Change: Students may create equations and/or inequalities to represent the economic impact of climate change.
- Climate Change: Students may apply geometric methods to solve design problems such as increasing access to green spaces in cities given physical and cost constraints.
