## Unit Overview

### Units of Measurement and Data

---

In this unit, students extend their earlier work with metric units of length, liquid volume, and mass to work with relative sizes of units and to perform conversions within the metric system. Students learn that using base units helps them comprehend relative sizes of measurements expressed in larger or smaller units. Students learn that a larger metric unit can be converted to a smaller metric unit by using multiplication. After working with metric units, students use a similar approach to learn about customary units. Students convert using units of time. Students extend their knowledge of area, perimeter, and line plots that show fractional measurements.

Students will extend their ability to add and subtract fractions and compare fractions. These include:

- **Relate Metric and Customary Units:** Students use place value understanding to relate metric units and equivalence tables to relate customary units.
- **Converts Units of Time:** Students use equivalence tables to convert units of time.
- **Create and Interpret Line Plots:** Students create line plots and use them to solve problems involving the addition and subtraction of fractional measurements.

### What Students Are Learning

- Students use multiplication and equivalence tables to convert from a larger unit of measure to a smaller unit of measure.
  - Students solve problems involving metric and customary units of measurement.
  - Students solve problems involving elapsed time.
  - Students use the formulas for the area and perimeter of rectangles. They apply the formulas to solve real-world problems.
  - Students create and interpret line plots that show fractional measurements.
- 
- What Did You See?
  - Decompose It
  - Which Benchmark Is It Closest To?
  - About How Much?
  - Where Does It Go?

## Standards

MATH.4.OA.A.3

Solve multi-step word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be

interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

MATH.4.M.A.1

Know relative sizes of measurement units within one system of units including km, m, cm, mm; kg, g; lb, oz.; l, ml; hr, min, sec. Within a single system of measurement, express measurements in a larger unit in terms of a smaller unit. Record measurement equivalents in a two-column table.

MATH.4.M.A.3

Apply the area and perimeter formulas for rectangles in real world and mathematical problems.

MATH.4.DL.B

Represent and interpret measurement data

MATH.4.DL.B.5

Make a line plot to display a data set of measurements in fractions of a unit ( $\frac{1}{2}$ ,  $\frac{1}{4}$ ,  $\frac{1}{8}$ ). Solve problems involving addition and subtraction of fractions by using information presented in line plots.
