## Unit Overview

### Geometric Figures

In this unit, students build on and formalize their understanding of shapes as they learn to define and name the building blocks of geometric figures, describe and classify shapes in more complex ways, and apply geometric concepts and properties to solve problems.

Students work and build on a framework of founding geometric concepts and skills by addressing the following objectives:

- **Understand Points, Lines, Line Segments, and Rays:** Students identify and draw points, lines, line segments, and rays.
- **Classify Angles:** Students classify angles as right, acute, or obtuse.
- **Draw and Measure Angles:** Students use a protractor to measure angles and draw angles of a specified measure.
- **Understand Parallel and Perpendicular Lines:** Students apply angle concepts to recognize parallel and perpendicular lines.
- **Add and Subtract Angle Measures:** Students use equations to find unknown angle measures. Students apply this understanding to solve problems involving unknown angle measures.
- **Classify Polygons:** Students use properties of shapes to classify polygons, including triangles and quadrilaterals.

### What Students Are Learning

- Students draw and name points, lines, line segments, and rays.
  - Students classify polygons according to their properties, such as the presence or absence of parallel and perpendicular lines.
  - Students use a protractor to measure angles and draw angles of a specified size.
  - Students add and subtract angle measures to find unknown angle measures and solve problems involving angles measures.
  - Students identify lines of symmetry and draw lines of symmetry on 2-dimensional figures.
- 
- Where Does It Go?
  - Find the Missing Values
  - About How Much?
  - Can you Make the Number?

## Standards

MATH.4.M.B.4.a	An angle is measured with reference to a circle with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle. An angle that turns through $\frac{1}{360}$ th of a circle is called a “one-degree angle,” and can be used to measure angles.
MATH.4.M.B.4.b	An angle that turns through $n$ one-degree angles is said to have an angle measure of $n$ degrees.
MATH.4.M.B.5	Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.
MATH.4.M.B.6	Recognize angle measure as additive. When an angle is decomposed into non-overlapping parts, the angle measure of the whole is the sum of the angle measures of the parts. Solve addition and subtraction problems to find unknown angles on a diagram in real world and mathematical problems, e.g., by using an equation with a symbol for the unknown angle measure.
MATH.4.G.A.1	Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures.
MATH.4.G.A.2	Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. Recognize right triangles as a category and identify right triangles.
MATH.4.G.A.3	Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts. Identify line-symmetric figures and draw lines of symmetry.
