

5 Math Unit 08: Divide Decimals

Content Area: **Mathematics**
Course(s):
Time Period: **Marking Period 2**
Length: **8 Days**
Status: **Published**

Unit Overview

Dividing Multi-Digit Whole Numbers

The unit opens with the use of different sized glasses and jugs to illustrate division by decimals. This is an opportunity to help students form a concrete understanding that dividing doesn't always mean "make smaller." Using context helps students see how many units "fit into" another quantity. Models may help students make informal connections to dividing a whole number by a decimal. This can help students understand that dividing by smaller pieces can produce more. A strategy used to divide a decimal by a decimal is to multiply the dividend and divisor by the same power of ten.

What Students Are Learning

- Students use strategies based on place value to divide decimals.
- Students estimate quotients of decimals
- Students represent division of decimals by a whole number
- Students use place value understanding and equivalent expressions to divide decimals by whole numbers
- Students divide whole numbers by decimals using grids and equivalent expressions
- Students divide decimals by decimals using area models to find partial quotients for equivalent equations.

Number Routines

- Where Does It Go?
- About How Much?
- Which one doesn't belong?
- Decompose It
- Notice & Wonder
- Is it always true?

Standards

MATH.5.NBT.A.2

Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.

MATH.5.NBT.B.7

Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used.
