Unit 01: Primitive Types

Content Area: **Computer Science**
Course(s):
Time Period: **Marking Period 1**
Length: **2-3 Weeks**
Status: **Published**

Summary

This unit introduces students to the Java programming language and the use of classes, providing students with a firm foundation of concepts that will be leveraged and built upon in all future units. Students will focus on writing the main method and will start to call preexisting methods to produce output. Students will start to learn about three built-in data types and learn how to create variables, store values, and interact with those variables using basic operations. The ability to write expressions is essential to representing the variability of the real world in a program and will be used in all future units.

Revison Date: July 2021

MA.F-IF.A	Understand the concept of a function and use function notation
LA.K-12.NJSLSA.L4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases by using context clues, analyzing meaningful word parts, and consulting general and specialized reference materials, as appropriate.
LA.K-12.NJSLSA.L5	Demonstrate understanding of word relationships and nuances in word meanings.
CS.9-12.8.1.12.AP.1	Design algorithms to solve computational problems using a combination of original and existing algorithms.
CS.9-12.8.1.12.AP.2	Create generalized computational solutions using collections instead of repeatedly using simple variables.
CS.9-12.8.1.12.AP.5	Decompose problems into smaller components through systematic analysis, using constructs such as procedures, modules, and/or objects.
CS.9-12.8.1.12.CS.1	Describe ways in which integrated systems hide underlying implementation details to simplify user experiences.
CS.9-12.8.1.12.CS.2	Model interactions between application software, system software, and hardware.
CS.9-12.8.1.12.CS.4	Develop guidelines that convey systematic troubleshooting strategies that others can use to identify and fix errors.
CS.9-12.8.1.12.DA.3	Translate between decimal numbers and binary numbers.
CS.9-12.8.1.12.DA.4	Explain the relationship between binary numbers and the storage and use of data in a computing device.
WRK.K-12.P.5	Utilize critical thinking to make sense of problems and persevere in solving them.
TECH.8.1.12.A.CS1	Understand and use technology systems.
TECH.8.1.12.B.CS1	Apply existing knowledge to generate new ideas, products, or processes.
TECH.8.1.12.E.CS4	Process data and report results.
TECH.8.2.12.E.1	Demonstrate an understanding of the problem-solving capacity of computers in our world.
TECH.8.2.12.E.3	Use a programming language to solve problems or accomplish a task (e.g., robotic functions, website designs, applications, and games).
TECH.8.2.12.E.CS1	Computational thinking and computer programming as tools used in design and engineering.

Essential Questions & Enduring Understanding

- Can you convert between variable types?
- How are mathematical operations evaluated in Java?
- How do you recognize and correct runtime errors?
- How do you recognize and correct syntax errors?
- How is an Integrated Development Environment (IDE) used to create Java programs?
- What is Java?
- What types of file extensions are used for Java programs?
- What types of variables can be created in Java and what information can they contain?

Objectives

Students Will Know

- how to display information on the console.
- how to create and manipulate variables.
- how to preform basic mathematical operations using the Java language.

Students Will Be Skilled At

- rewriting mathematical formulas in Java.
- asking users for input and utilizing that input to solve a given problem.
- determining syntax error and runtime error causes and how to fix them.

Learning Plan

Lecture on primative types, pair programming exercise on evaluating Java expressions

Demonstration on IDE: creating new projects, new programs, running programs, debugging and reading error messages.

Pair programming exercises on error analysis.

Pair programming exercises on casting between primitive types.

Individual lab assignment demonstrating mastery of input and output, storage of variables & evaluating expressions using mathematical operations.

Assessment

Assessments

- Formative: Daily assessments using examples from class notes and CodeHS.com, AP Classroom/Albert Checks for Understanding
- Summative: Teacher-created assessments/projects and CodeHS Computer Science Projects, AP Classroom/Albert Unit Assessments
- Benchmark: Check for understanding benchmark assessments on CodeHS, AP Classroom/Albert/Khan Academy Diagnostics
- Alternative Assessments: Student-centered activities such as a doorbell coding project, game design projects, and other activities involving real world applications

complete performance tasks:

- Students will be able to design programs using appropriate code.
- Students will be able to write programs using appropriate code.

complete quizzes/tests:

- Design of a program
- Structure of a program
- Algorithms

complete sample AP multiple choice questions.
