Summary

Students strengthen their skills associated with place value patterns, operations with whole numbers and decimals, operations with fractions, and geometric measurement, including volume. Students learn that each digit in a number represents ten times what it represents in the place to its right, and use this understanding to perform multi-digit arithmetic. They become proficient in multiplying and dividing multi-digit whole numbers and in adding, subtracting, multiplying, and dividing decimals to the hundredths place. Students also develop skills in performing operations with fractions, including addition, subtraction, multiplication, and division. They apply these operations to solve real-world problems involving fractions. Geometric measurement is another focus, where students learn to understand concepts of volume and calculate it. They use unit cubes to build a foundation for volume calculation and apply the volume formulas for these shapes. Overall, these standards aim to build a strong mathematical foundation and prepare students for more advanced concepts in middle school.
