

Unit 1: Structure and Function

Content Area: **Science**
Course(s): **Biology/Lab**
Time Period: **1st Marking Period**
Length: **10 Weeks**
Status: **Published**

Unit Overview

Cells are the basic units of life. Cell parts carry out functions necessary for the survival of the cell/organism. Cells must maintain homeostasis.

Transfer

Students will be able to independently use their learning to...

- Predict the response of a cell to changes in its environment.
- Identify the proper amino acid sequence when given a DNA nucleotide sequence.

Meaning

Understandings

Students will understand that...

- Biological molecules are made of repeating subunits.
- Living things are made of cells.
- DNA determines the structure of a protein.
- Cell transport of materials is dependent on the structure and function of the cell membrane.

Essential Questions

Students will keep considering...

- How do the structures of organisms enable life's functions?
- How does DNA determine the functioning of a cell and organisms?

Application of Knowledge and Skill

Students will know...

Students will know...

- Living things are made of one or more cells.
- Multicellular organisms are made up of cells, tissues, organs, and organ systems.
- Cell structures are responsible for carrying out specific functions for the organism.
- Living things must maintain homeostasis.
- DNA is made up of a particular sequence of subunits which are used to make a certain proteins.

Students will be skilled at...

Students will be skilled at...

- Describing how a living thing is organized.
- Modeling the structure of nucleic acids and proteins.
- Predicting the cell's response to different types of environment.

Academic Vocabulary

Cell

Unicellular

Multicellular

Prokaryote

Eukaryote

Organelle

Cell membrane

Cell wall

Nucleus

Cytoplasm/Cytosol

Ribosomes

Mitochondria

Chloroplasts

Golgi apparatus

Endoplasmic reticulum

Deoxyribonucleic Acid

Ribonucleic Acid

Nucleic Acid

Nucleotides

Proteins

Amino Acids

Peptide bond

Replication

Transcription

Translation

Purine

Pyrimidine

Double helix

Complementary base pairs

Replication fork

Helicase

DNA polymerase

RNA polymerase

Adenine

Guanine

Thymine

Cytosine

Uracil

Promoter

Terminal signal

Dipeptide

Polypeptide

Lipids

Tissues

Organs

Organ system

Homeostasis

Passive transport

Diffusion

Concentration gradient

Equilibrium

Osmosis

Hypotonic solution

Cytolysis

Turgor pressure

Hypertonic solution

Plasmolysis

Isotonic solution

Contractile vacuole

Facilitated diffusion

Carrier proteins

Ion channels

Active transport

Cell membrane pumps

Sodium-potassium pump

Endocytosis

Pinocytosis

Phagocytosis

Exocytosis

Learning Goal 1

Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms.

Proficiency Scale

- Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms.

SCI.HS-LS1-2

Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms.

Target 1

SWBAT:

- Identify characteristics of living things.
- Define cell and describe the types of cells.
- Restate the Cell Theory.

- -Define cell and describe the types of cells.
- -Identify characteristics of living things.
- -Restate the Cell Theory.

Target 2

SWBAT:

- Differentiate between unicellular and multicellular organisms.
- Describe the structure and function of relevant organelles.
- Describe the relationship between cells, tissues, organs and organ systems.
- Illustrate the hierarchical organization of interacting systems.

- -Describe the structure and function of relevant organelles.
- -Differentiate between unicellular and multicellular organisms.
- -Illustrate the hierarchical organization of interacting systems.

Learning Goal 2

Construct and revise an explanation based on evidence for how carbon, hydrogen and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules.

Proficiency Scale

- Construct and revise an explanation based on evidence for how carbon, hydrogen and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules.

SCI.HS-LS1-6

Construct and revise an explanation based on evidence for how carbon, hydrogen, and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules.

Target 1

-Identify the atoms in carbohydrates and other large carbon-based molecules.

-Show the relationship between carbon-based molecules.

- -Identify the atoms in carbohydrates and other large carbon-based molecules.
- -Show the relationship between carbon-based molecules.

Learning Goal 3

Plan and conduct an investigation to provide evidence that feedback mechanisms maintain homeostasis.

Proficiency Scale

- Plan and conduct an investigation to provide evidence that feedback mechanisms maintain homeostasis.

SCI.HS-LS1-3

Plan and conduct an investigation to provide evidence that feedback mechanisms maintain homeostasis.

SCI.HS-LS1-1

Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins which carry out the essential functions of life through systems of specialized cells.

Target 1

SWBAT:

-Define homeostasis and describe the permeability of the cell membrane.

-Define passive transport and describe its types.

-Predict the flow of water when cells are in different environments.

-Construct models that explain the movement of molecules across membranes with membrane structure and function.

- -Construct models that explain the movement of molecules across membranes with membrane structure and function.
- -Define homeostasis and describe the permeability of the cell membrane.
- -Define passive transport and describe its types.
- -Predict the flow of water when cells are in different environments.

Target 2

SWBAT:

- Define active transport and describe its types.
 - Describe how active transport allows living things to function properly.
 - Differentiate between negative and positive feedback mechanisms.
 - Provide examples and explain how organisms use feedback systems to maintain their internal environments.
-
- -Define active transport and describe its types.
 - -Describe how active transport allows living things to function properly.
 - -Provide examples and explain how organisms use feedback systems to maintain their internal environments.

Learning Goal 4

Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins which carry out the essential function of life through systems of specialized cells.

Proficiency Scale

- Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins which carry out the essential function of life through systems of specialized cells.

SCI.HS-LS1-1

Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins which carry out the essential functions of life through systems of specialized cells.

Target 1

SWBAT:

- Explain the connection between the sequence and the subcomponents of a biomolecule and its properties.
- Describe the structure and function of the DNA molecule and the importance of replication to organisms.
- Determine the complementary strand of DNA when given a DNA sequence.

- -Describe the structure and function of the DNA molecule and the importance of replication to organisms.
- -Determine the complementary strand of DNA when given a DNA sequence.
- -Explain the connection between the sequence and the subcomponents of a biomolecule and its properties.

Target 2

SWBAT:

-Describe the structure and functions of each type of RNA molecule and the importance of transcription.

-Determine the complementary strand of RNA when given a DNA sequence.

- -Describe the structure and functions of each type of RNA molecule and the importance of transcription.
- -Determine the complementary strand of RNA when given a DNA sequence.

Target 3

SWBAT:

-Identify the importance of ribosomes in the process of translation.

-Create representations that explain how genetic information flows from a sequence of nucleotides in a gene to a sequence of amino acids in a protein.

-Determine the sequence of amino acids when given a DNA sequence.

- -Create representations that explain how genetic information flows from a sequence of nucleotides in a gene to a sequence of amino acids in a protein.
- -Determine the sequence of amino acids when given a DNA sequence.
- -Identify the importance of ribosomes in the process of translation.

Formative Assessment and Performance Opportunities

-Science notebook

-Homework assignments

-Classwork assignments

-Lab activities/explorations

-Quizzes, Tests, Projects

Summative Assessment

Common unit assessment aligned to the NJSL and differentiated for varied learners.

Accommodations/Modifications

-504 accommodations

-IEP modifications

-Science notebook entries

-Videos, models, posters

Ex:

- 3D plant and animal cell models
- Lab demonstration of cellular transport
- Demonstrate protein synthesis through physical modeling and or visual representation

Unit Resources

- Holt Modern Biology, 2009

-Supplemental textbook materials

-Online resources

-Laptops

-Student Response Systems

-Lab materials

21st Century Life and Careers

CRP.K-12.CRP1.1

Career-ready individuals understand the obligations and responsibilities of being a member of a community, and they demonstrate this understanding every day through their interactions with others. They are conscientious of the impacts of their decisions on others and the environment around them. They think about the near-term and long-term consequences of their actions and seek to act in ways that contribute to the betterment of

their teams, families, community and workplace. They are reliable and consistent in going beyond the minimum expectation and in participating in activities that serve the greater good.

CRP.K-12.CRP2.1	Career-ready individuals readily access and use the knowledge and skills acquired through experience and education to be more productive. They make connections between abstract concepts with real-world applications, and they make correct insights about when it is appropriate to apply the use of an academic skill in a workplace situation.
CRP.K-12.CRP4.1	Career-ready individuals communicate thoughts, ideas, and action plans with clarity, whether using written, verbal, and/or visual methods. They communicate in the workplace with clarity and purpose to make maximum use of their own and others' time. They are excellent writers; they master conventions, word choice, and organization, and use effective tone and presentation skills to articulate ideas. They are skilled at interacting with others; they are active listeners and speak clearly and with purpose. Career-ready individuals think about the audience for their communication and prepare accordingly to ensure the desired outcome.
CRP.K-12.CRP5.1	Career-ready individuals understand the interrelated nature of their actions and regularly make decisions that positively impact and/or mitigate negative impact on other people, organization, and the environment. They are aware of and utilize new technologies, understandings, procedures, materials, and regulations affecting the nature of their work as it relates to the impact on the social condition, the environment and the profitability of the organization.
CRP.K-12.CRP6.1	Career-ready individuals regularly think of ideas that solve problems in new and different ways, and they contribute those ideas in a useful and productive manner to improve their organization. They can consider unconventional ideas and suggestions as solutions to issues, tasks or problems, and they discern which ideas and suggestions will add greatest value. They seek new methods, practices, and ideas from a variety of sources and seek to apply those ideas to their own workplace. They take action on their ideas and understand how to bring innovation to an organization.
CRP.K-12.CRP7.1	Career-ready individuals are discerning in accepting and using new information to make decisions, change practices or inform strategies. They use reliable research process to search for new information. They evaluate the validity of sources when considering the use and adoption of external information or practices in their workplace situation.
CRP.K-12.CRP8.1	Career-ready individuals readily recognize problems in the workplace, understand the nature of the problem, and devise effective plans to solve the problem. They are aware of problems when they occur and take action quickly to address the problem; they thoughtfully investigate the root cause of the problem prior to introducing solutions. They carefully consider the options to solve the problem. Once a solution is agreed upon, they follow through to ensure the problem is solved, whether through their own actions or the actions of others.
CRP.K-12.CRP9.1	Career-ready individuals consistently act in ways that align personal and community-held ideals and principles while employing strategies to positively influence others in the workplace. They have a clear understanding of integrity and act on this understanding in every decision. They use a variety of means to positively impact the directions and actions of a team or organization, and they apply insights into human behavior to change others' action, attitudes and/or beliefs. They recognize the near-term and long-term effects that management's actions and attitudes can have on productivity, morals and organizational culture.
CRP.K-12.CRP12.1	Career-ready individuals positively contribute to every team, whether formal or informal. They apply an awareness of cultural difference to avoid barriers to productive and positive interaction. They find ways to increase the engagement and contribution of all team members. They plan and facilitate effective team meetings.

LA.RST.11-12.1	Accurately cite strong and thorough evidence from the text to support analysis of science and technical texts, attending to precise details for explanations or descriptions.
LA.WHST.11-12.2	Write informative/explanatory texts, including the narration of historical events, scientific procedures/experiments, or technical processes.
LA.WHST.11-12.5	Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience.
LA.WHST.11-12.7	Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
LA.WHST.11-12.8	Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the specific task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
LA.WHST.11-12.9	Draw evidence from informational texts to support analysis, reflection, and research.
LA.SL.11-12.5	Make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.
