Unit 12: Thermochemistry

Learning Objectives

- How can you determine the amount of energy absorbed or released in a chemical or physical process?
- How is energy absorbed or released in a reaction?
- How is energy conserved in a chemical or physical process?
- What is meant by “energy is conserved”?

Essential Skills

- Define heat capacity, enthalpy, entropy, thermochemical equation, Hess’s law.
- Define system and surroundings; give examples.
- Describe how you can measure the change of enthalpy in a reaction
- Explain the different between energy and heat
- Express the enthalpy change for a given reaction
- Identify 2 factors on which the heat capacity of an object depends
- Write and solve thermochemical equations for enthalpy

Standards

9-12.HS-PS1-3

Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.

9-12.HS-PS3-4

Plan and conduct an investigation to provide evidence that the transfer of thermal energy when two components of different temperature are combined within a closed system results in a more uniform energy distribution among the components in the system

(second law of thermodynamics).

9-12.HS-PS3-1

Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.

9-12.HS-PS1-4

Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.
