## Unit 1: Foundations—Matter, Changes & Measurement

### Standards

SCI.9-12.HS-PS1-8	Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.
SCI.9-12.HS-PS1-6	Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium.
SCI.9-12.HS-PS1-4	Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.
SCI.9-12.HS-PS1-2	Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.
SCI.9-12.HS-PS1-7	Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.
SCI.9-12.HS-PS1-3	Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.
SCI.HS-PS1-8	Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.
SCI.HS-PS1-3	Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.
9-12.HS-PS1-1	Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.

### Learning Objectives

- Analyze measurement precision and accuracy in lab data.

- Apply SI units, significant figures, and unit conversions in problem solving.
- Calculate density and interpret its significance.
- Classify substances as elements, compounds, or mixtures.
- determine the difference and provide examples of physical and chemical changes
- determine whether changes of matters are chemical or physical
- determine whether physical properties are intensive or extensive
- Distinguish physical vs. chemical properties and changes.
- draw conclusions based on observations and recorded data
- Form hypotheses and form a plan to launch water bottle rockets to reach a high height
- Plan and conduct an investigation to compare the structure of substances at the bulk scale to infer the strength of the electrical force between particles.
- Represent matter quantitatively using the mole concept (introductory level).

## Essential Questions
