Unit 7: Chemical Reactions

Essential Questions

- How can you predict the products of a chemical reaction?
- How do chemical reactions obey the law of conservation of mass?
- What does the law of conservation of mass mean?
- What would this mean for a chemical reaction?

Objectives

- Describe the information found in a net ionic equation
- Describe the steps for writing and balancing a chemical equation
- Identify the 5 general types of reactions
- Predict the formation of a precipitate in a double replacement reaction
- Show how to write a skeleton chemical reaction
- Use the metal activities series to determine whether a reaction occurs

Standards

9-12.HS-PS1-7

Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.

9-12.HS-PS1-2

Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.
