Unit 8: Stoichiometry

Learning Objectives

- How are balanced chemical equations used in stoichiometric calculations?
- How can you calculate amounts of reactants and products in a chemical reaction?
- What information do you need to calculate the amount of reactant and product?
- What is conserved in a balanced chemical equation?

Essential Skills

- Calculate the percent yield for given situations
- Describe the quantities you can use to interpret a balanced chemical equation
- Explain how mole ratios are used in chemical calculations
- Explain how the amount of product in a reaction is affected by a limiting reactant
- Put into action the steps for solving a stoichiometric problem
- Show how chemist use balanced chemical equations

Standards

9-12.HS-PS1-7

Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.

9-12.HS-PS1-2

Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.
