## Unit 5: Ionic and Molecular Compounds and Nomenclature

---

### Essential Questions

---

- How do electrons affect the shape of a molecule?
- How do ionic compounds form?
- How does metallic bonding affect the properties of metals?
- How does the charge of an atom change if it gains or loses an electron?
- How does the periodic table help you determine the names and formulas of ions and compounds?
- How is the bonding of molecular compounds different from ionic compounds?
- Other than gaining or losing electrons, how do atoms attain noble gas configuration?
- What factors affect molecular properties?
- What is an ion?
- What is the difference between an ionic and a molecular compound?

### Objectives

---

- Apply the rules of naming for ionic compounds
- Assign the correct prefix for naming molecular compounds
- Calculate electronegativity differences for molecular compounds
- Describe how cations and anions form
- Describe how polyatomic ions differ from monatomic ions
- Describe how resonance structures are used
- Describe the relationship between atomic and molecular orbits

- Describe three properties of ionic compounds
- Determine the number of valence electrons for an element using the periodic table
- Evaluate whether the molecule is polar or non-polar
- Explain how to determine the charges of monatomic ions
- Explain the electrical charge of an ionic compound
- Explain the importance of metal alloys
- Explain the result of electron sharing in a covalent bond
- Identify exceptions to the octet rule
- Identify the information a molecular compound provides
- Identify the trend whether an element is losing or gaining electrons
- Model the valence electrons of a metal atom
- Predict VSEPR shapes from given molecules
- Put into action naming ionic compounds with polyatomic ions and transition metals
- Relate the strength of bonds between ionic and covalent bonds

## Standards

---

9-12.HS-PS1-1	Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.
9-12.HS-PS2-6	Communicate scientific and technical information about why the molecular-level structure is important in the functioning of designed materials.
9-12.HS-PS1-3	Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.
9-12.HS-PS1-2	Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.
