Unit 1: Motion

Learning Objectives

- How will you be able to describe a change in position?
- How are speed, velocity and acceleration related?
- How can you distinguish between uniform motion and uniform acceleration?
- How does gravity affect the motion of an object?
- How is the graphical representation of motion analyzed using equations?
- How is the motion of an object related to different graphs of the motion of an object.

Essential Skills

- Calculate the velocity and the displacement of an object undergoing constant acceleration.
- Define velocity and acceleration operationally.
- Determine from the curves on a velocity-time graph both the constant and instantaneous acceleration.
- Interpret a v-t graph to find the time at which an object has a specific velocity.
- Interpret graphs for a moving object and describe in words the information presented in graphs.
- Recognize the meaning of the acceleration due to gravity.
- Relate the direction and magnitude of velocity and acceleration to the motion of objects.
- Use the motion equations to solve problems involving freely falling objects.
- Write equations that describe the position of an object moving at constant velocity.

Standards

9-12.HS-PS2-1

Analyze data to support the claim that Newton's second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration.
