Unit 7: Waves

Learning Objectives

- How do waves impact our lives?
- How do waves interact?
- How do waves transfer energy?

Essential Skills

- Apply the principle of superposition to the phenomenon of interference.
- Contrast transverse and longitudinal waves.
- Describe how waves are reflected and refracted at boundaries between media, and explain how waves diffract.
- Identify how waves transfer energy without transferring matter.
- Relate a wave’s speed to the medium in which the wave travels.
- Relate wave speed, wavelength, and frequency.

Standards

9-12.HS-PS3-1	Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.
9-12.HS-PS4-1	Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media.
9-12.HS-PS3-2	Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motion of particles (objects)

and energy associated with the relative position of particles (objects).
