## Unit 4: Energy

---

### Learning Objectives

---

- How are work and power related to energy and each other?
- How do changes in the amount of energy occur?
- What is the difference between momentum and energy?
- Why does energy have a role in the physical world?

### Essential Skills

---

- Calculate the kinetic energy of a moving object
- Compare the system before and after an event in energy problems.
- Describe relationship -> work and energy.
- Determine how to find the gravitational potential energy of a system.
- Differentiate between work and power.
- Identify ways in which elastic potential energy is stored in a system.
- Use a model to relate work and energy.
- Identify the force that does work.

### Standards

---

9-12.HS-PS3-1

Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.

9-12.HS-PS3-3

Design, build, and refine a device that works within given constraints to convert one form

of energy into another form of energy.

9-12.HS-PS3-2

Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motion of particles (objects) and energy associated with the relative position of particles (objects).
