Unit Summary

Unit #5 focuses on the relations on the coordinate plane. It's also a nice transition into Algebra II as it links many of the Geometric concepts that we have encountered throughout the year to Algebra. In that manner, it's a great way to review the year and many of the key concepts from Algebra I.

Learning Objectives

- Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with typographic grid systems based on ratios).
- Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder).

Essential Skills

• Apply geometric methods to solve design problems.

• Use geometric shapes, their measurements, and their properties to describe objects. Example a basketball is a sphere.
