Unit 1 Title: Atoms and Atomic Theory

Learning Objectives

- Atoms are the building blocks of all matter
- Electrons orbiting the nucleus explain chemical properties and contribute to chemical changes
- Forces within the nucleus explain atomic stability and nuclear change
- Observation and accurate measurement is vital to discovering knowledge in the laboratory
- Our understanding of atoms has evolved over time
- Quantities of small particles is best communicated and calculated through the mole concept
- Sub-atomic particle combinations in atoms creates the unique properties of elements

Standards

SCI.HS-PS1-6	Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium.
SCI.HS-PS1-8	Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.
SCI.HS-PS1-1	Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.
