## Unit 7 Title: Equilibrium and Acid-Base Chemistry

---

### Essential Questions

---

- How can an equilibrium constant value be used to draw conclusions about the competing energy factors of a forward and reverse reaction?
- How can ion concentration measurements be used to calculate pH values for aqueous solutions?
- How can knowledge of gas laws and thermodynamics be used to predict shifting of equilibrium position per LeChatelier's Principle?
- How do strong and weak acids compare in terms of bond energies, pH and equilibrium constants?
- What ions and behaviors define acids and bases in chemistry?
- What is an equivalence point and how can a lab titration be used to determine an equivalence point?
- What measurements and calculations can be used to calculate the equilibrium constant for a reaction?
- Why do reverse reactions occur when chemical reactants and particles are studied in an enclosed system?

### Standards

---

SCI.HS-PS1-6	Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium.
SCI.HS-PS1-4	Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.
SCI.HS-PS1-5	Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs.
SCI.HS-PS3-2	Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motions of particles (objects) and energy associated with the relative position of particles (objects).
